Index de Périodiques Canadiens, 2002 **Bowker's Guide to Characters in Fiction**, 2003 Palaeobiology of Giant Flightless Birds Delphine Angst, Eric Buffetaut, 2017-11-16 The fossil record of giant flightless birds extends back to the Late Cretaceous more than 70 million years ago but our understanding of these extinct birds is still incomplete This is partly because the number of specimens available is sometimes limited but also because widely different approaches have been used to study them with sometimes contradictory results This book summarizes the current knowledge of the paleobiology of seven groups of giant flightless birds Dinornithiformes Aepyornithiformes Dromornithidae Phorusrhacidae Brontornithidae Gastornithidae and Gargantuavis The first chapter presents the global diversity of these birds and reviews the tools and methods used to study their paleobiology Chapters 2 to 8 are each dedicated to one of the seven groups of extinct birds Finally a conclusion offers a global synthesis of the information presented in the book in an attempt to define a common evolutionary model Focuses on the giant flightless birds that evolved independently in different parts of the world since the Cretaceous period Covers a number of different families with different evolutionary histories providing a source of interesting comparisons Provides emphasis on the palaeobiology of these birds including their evolution adaptations mode of life ecology and extinction
