Short Time Geometry Of Random Heat Kernels:

Short-Time Geometry of Random Heat Kernels Richard Bucher Sowers,2014-09-11 This volume studies the behaviour of a random heat kernel associated with a stochastic partial differential equation and gives short time expansion of this heat kernel The author finds that the dominant exponential term is classical and depends only on the Riemannian distance function The second exponential term is a work term and also has classical meaning There is also a third non negligible exponential term which blows up The author finds an expression for this third exponential term which involves a random translation of the index form and the equations of Jacobi fields In the process he develops a method to approximate the heat kernel to any arbitrary degree of precision   Short-Time Geometry of Random Heat Kernels Richard Bucher Sowers,1998 This volume studies the behaviour of a random heat kernel associated with a stochastic partial differential equation and gives short time expansion of this heat kernel The author finds that the dominant exponential term is classical and depends only on the Riemannian distance function The second exponential term is a work term and also has classical meaning There is also a third non negligible exponential term which blows up The author finds an expression for this third exponential term which involves a random translation of the index form and the equations of Jacobi fields In the process he develops a method to approximate the heat kernel to any arbitrary degree of precision   **Semiclassical Analysis for Diffusions and Stochastic Processes** Vassili N. Kolokoltsov,2007-12-03 The monograph is devoted mainly to the analytical study of the differential pseudo differential and stochastic evolution equations describing the transition probabilities of various Markov processes These include i diffusions in particular degenerate diffusions ii more general jump diffusions especially stable jump diffusions driven by stable L vy processes iii complex stochastic Schr dinger equations which correspond to models of quantum open systems The main results of the book concern the existence two sided estimates path integral representation and small time and semiclassical asymptotics for the Green functions or fundamental solutions of these equations which represent the transition probability densities of the corresponding random process The boundary value problem for Hamiltonian systems and some spectral asymptotics ar also discussed Readers should have an elementary knowledge of probability complex and functional analysis and calculus   Algebraic and Strong Splittings of Extensions of Banach Algebras William G. Bade,Harold G. Dales,Zinaida Alexandrovna Lykova,1999 In this volume the authors address the following Let A be a Banach algebra and let sum 0 rightarrow I rightarrow frak A overset pi to longrightarrow A rightarrow 0 be an extension of A where frak A is a Banach algebra and I is a closed ideal in frak A The extension splits algebraically respectively splits strongly if there is a homomorphism respectively continuous homomorphism theta A rightarrow frak A such that pi circ theta is the identity on A Consider first for which Banach algebras A it is true that every extension of A in a particular class of extensions splits either algebraically or strongly and second for which Banach algebras it is true that every extension of A in a particular class which splits algebraically also splits strongly These questions are closely related to the

question when the algebra frak A has a strong Wedderburn decomposition The main technique for resolving these questions involves the Banach cohomology group cal H2 A E for a Banach A bimodule E and related cohomology groups Later chapters are particularly concerned with the case where the ideal I is finite dimensional Results are obtained for many of the standard Banach algebras A **Rank 3 Amalgams** Bernd Stellmacher,Franz Georg Timmesfeld,1998 This book is intended for graduate students and research mathematicians working in classical linear algebraic **Invariants under Tori of Rings of Differential Operators and Related Topics** Ian Malcolm Musson,M. van den Bergh,1998 If G is a reductive algebraic group acting rationally on a smooth affine variety X then it is generally believed that D X has properties very similar to those of enveloping algebras of semisimple Lie algebras In this book the authors show that this is indeed the case when G is a torus and X k times k They give a precise description of the primitive ideals in D X and study in detail the ring theoretical and homological properties of the minimal primitive quotients of D X The latter are of the form B D X germ g chi germ g where germ g rm Lie G chi in germ g ast and germ g chi germ g is the set of all v chi v with v in germ g They occur as rings of twisted differential operators on toric varieties It is also proven that if G is a torus acting rationally on a smooth affine variety then D X G is a simple ring **Squared Hopf Algebras** Volodymyr V. Lyubashenko,1999 This book is intended for graduate students and research mathematicians interested in associative rings and algebras **Flat Extensions of Positive Moment Matrices: Recursively Generated Relations** Raúl E. Curto,Lawrence A. Fialkow,1998 In this book the authors develop new computational tests for existence and uniqueness of representing measures mu in the Truncated Complex Moment Problem gamma ij int bar zizj d mu 0 le i j le 2n Conditions for the existence of finitely atomic representing measures are expressed in terms of positivity and extension properties of the moment matrix M n gamma associated with gamma equiv gamma 2n gamma 00 dots gamma 0 2n dots gamma 2n 0 gamma 00 0 This study includes new conditions for flat i e rank preserving extensions M n 1 of M n ge 0 each such extension corresponds to a distinct rank M n atomic representing measure and each such measure is minimal among representing measures in terms of the cardinality of its support For a natural class of moment matrices satisfying the tests of recursive generation recursive consistency and normal consistency the existence problem for minimal representing measures is reduced to the solubility of small systems of multivariable algebraic equations In a variety of applications including cases of the quartic moment problem n 2 the text includes explicit contructions of minimal representing measures via the theory of flat extensions Additional computational texts are used to prove non existence of representing measures or the non existence of minimal representing measures These tests are used to illustrate in very concrete terms new phenomena associated with higher dimensional moment problems that do not appear in the classical one dimensional moment problem **Homogeneous Integral Table Algebras of Degree Three: A Trilogy** Harvey I. Blau,2000 Homogeneous integral table algebras of degree three with a faithful real element The algebras of the title are classified to exact isomorphism that is the sets of structure constants which arise from the given basis are

completely determined Other results describe all possible extensions pre images with a faithful element which is not necessarily real of certain simple homogeneous integral table algebras of degree three On antisymmetric homogeneous integral table algebras of degree three This paper determines the homogeneous integral table algebras of degree three in which the given basis has a faithful element and has no nontrivial elements that are either real symmetric or linear and where an additional hypothesis is satisfied It is shown that all such bases must occur as the set of orbit sums in the complex group algebra of a finite abelian group under the action of a fixed point free automorphism oforder three Homogeneous integral table algebras of degree three with no nontrivial linear elements The algebras of the title which also have a faithful element are determined to exact isomorphism All of the simple homogeneous integral table algebras of degree three are displayed and the commutative association schemes in which all the nondiagonal relations have valency three and where some relation defines a connected graph on the underlying set are classified up to algebraic isomorphism **Featured Reviews in Mathematical Reviews 1997-1999** Donald G.
