**Geometry of Sporadic Groups: Representations and amalgams** A. A. Ivanov, Aleksandr Anatolievich Ivanov, Sergei V. Shpectorov, 1999 This is the second volume in a two volume set which provides a complete self contained proof of the classification of geometries associated with sporadic simple groups Petersen and tilde geometries The second volume contains a study of the representations of the geometries under consideration in GF 2 vector spaces as well as in some non abelian groups The central part is the classification of the amalgam of maximal parabolics associated with a flag transitive action on a Petersen or tilde geometry The classification is based on the method of group amalgam the most promising tool in modern finite group theory Via their systematic treatment of group amalgams the authors establish a deep and important mathematical result This book will be of great interest to researchers in finite group theory finite geometries and algebraic combinatorics

**Investigations in Algebraic Theory of Combinatorial Objects** I.A. Faradzev, A.A. Ivanov, M. Klin, A.J. Woldar, 2013-06-29 X K chendorffer L A Kalu lnin and their students in the 50s and 60s Nowadays the most deeply developed is the theory of binary invariant relations and their combinatorial approximations These combinatorial approximations arose repeatedly during this century under various names Hecke algebras centralizer rings association schemes coherent configurations cellular rings etc see the first paper of the collection for details and in various branches of mathematics both pure and applied One of these approximations the theory of cellular rings cellular algebras was developed at the end of the 60s by B Yu Weisfeiler and A A Leman in the course of the first serious attempt to study the complexity of the graph isomorphism problem one of the central problems in the modern theory of combinatorial algorithms At roughly the same time G M Adelson Velskir V L Arlazarov I A Faradtev and their colleagues had developed a rather efficient tool for the constructive enumeration of combinatorial objects based on the branch and bound method By means of this tool a number of sports like results were obtained Some of these results are still unsurpassed

Groups, Combinatorics and Geometry Martin W. Liebeck, 1992-09-10 This volume contains a collection of papers on the subject of the classification of finite simple groups

The Mathieu Groups A. A. Ivanov, 2018-06-21 The Mathieu Groups are presented in the context of finite geometry and the theory of group amalgams
