## Perspectives On Receptor Classification:

Perspectives on Receptor Classification Heinz Otto Schild,1987      Perspectives on Receptor Classification J. W. Black,D. H. Jenkinson,V. P. Gerskowitch,1987-01-01      Neuroendocrine Perspectives Eugenio E. Müller,Robert M. MacLeod,2012-12-06 Topics of special interest in current research are presented in each volume of the series Neuroendocrine Perspectives Volume 8 has five major sections that address new findings in our knowledge of the CNS neurotransmitter and neuropeptide systems They broaden the traditional view of the hypothalamo pituitary control and of the modulation of brain function by target hormones      Environmental Health Perspectives ,1993      **Chemistry: A Cultural Perspective** Christine Bladon,Peter Wyatt,2025-09-30 This book gives a series of stories to illustrate the impact of chemistry on the lives of people from the past to the present day This book gives chemistry students and lay readers a window into how interactions at the atomic level translate into familiar materials Teachers of chemistry and related subjects may also find the content and wealth of detail in this book a valuable resource to supplement their lecture room and classroom courses Key Features A readable and accessible account of the science underpinning a diverse range of naturally occurring and synthetic substances that are encountered in everyday life Source of engaging material which showcases the multidisciplinary nature of chemistry A text rich in molecular structures explanatory diagrams and images to promote a thorough grasp of the chemistry presented Dynamic aspect of the chemistry conveyed through a narrative combining historical perspectives and modern developments Inclusion of practical resources shows how concepts can be applied in practice      **National Library of Medicine Current Catalog** National Library of Medicine (U.S.),1988      *Journal of Pineal Research* ,1989      Receptor Autoradiography Dr. John Wharton,Julia M. Polak,1993 Receptor autoradiography is an invaluable technique that is widely used to localize and characterize peptide and neurotransmitter binding sites Its extensive use reflects the utility of the technique and the important advantages it offers over conventional biochemical procedures This instructive work makes receptor autoradiography more accessible by giving a detailed account of the methodology and its application in the analysis of receptors in the brain and peripheral organs These examples are not exhaustive but illustrate the versatility of the technique as well as its potential pitfalls The book provides an introduction to the receptor concept and gives detailed information on the theory and procedures involved in the autoradiographic localization and quantification of radiolabelled ligand binding sites This volume will be an essential tool for neuroscientists pharmacologists histochemists neuropathologists researchers in the pharmaceutical industry and students of the biological sciences      Prostate Cancer: A Comprehensive Perspective Ashutosh Tewari,2013-04-05 Prostate cancer is the commonest male cancer with over 5 million survivors in US alone Worldwide the problem is staggering and has attracted significant attention by media scientists and cancer experts Significant research discoveries innovations and advances in treatment of this cancer have produced voluminous literature which is difficult to synthesize and assimilate by the medical community Prostate Cancer A Comprehensive Perspective is a

comprehensive and definitive source which neatly resolves this problem It covers relevant literature by leading experts in basic science molecular biology epidemiology cancer prevention cellular imaging staging treatment targeted therapeutics and innovative technologies Prostate Cancer A Comprehensive Perspective is a valuable and timely resource for urologists and oncologists Perspectives in Psychopharmacology Earl Usdin,1988 **Trends in Receptor Research** Piero Angeli,Ugo Gulini,Wilma Quaglia,1992 The 8th Camerino Noordwijkerhout Symposium has continued along its traditional path of interdisciplinary cooperation Chemists biochemists pharmacologists biophysicists and physiologists are all involved in the task of improving our knowledge of the mechanisms of drug receptor interaction and of the heterogeneous nature of biological molecules In this volume leading researchers have contributed state of the art information on receptor chemistry Newest developments are covered with particular reference to receptors of the nervous system SAR studies receptor isolation receptor cloning receptor topography biomedical consequences of occupancy receptor regulation and receptor theory This will be of great interest to pharmacologists biochemists and medicinal chemists as well as a valuable source of reference for medical students and postgraduate students in related fields Physiological and Pathological Responses to Hypoxia and High Altitude Rodrigo Iturriaga,Rodrigo Del Rio,Jean-Paul R-Richalet,2020-06-22 The appearance of photosynthetic organisms about 3 billion years ago increased the partial pressure of oxygen PO<sub>2</sub> in the atmosphere and enabled the evolution of organisms that use glucose and oxygen to produce ATP by oxidative phosphorylation Hypoxia is commonly defined as the reduced availability of oxygen in the tissues produced by different causes which include reduction of atmospheric PO<sub>2</sub> as in high altitude and secondary to pathological conditions such as sleep breathing and pulmonary disorders anemia and cardiovascular alterations leading to inadequate transport delivery and exchange of oxygen between capillaries and cells Nowadays it has been shown that hypoxia plays an important role in the genesis of several human pathologies including cardiovascular renal myocardial and cerebral diseases in fetal young and adult life Several mechanisms have evolved to maintain oxygen homeostasis Certainly all cells respond and adapt to hypoxia but only a few of them can detect hypoxia and initiate a cascade of signals intended to produce a functional systemic response In mammals oxygen detection mechanisms have been extensively studied in erythropoietin producing cells chromaffin cells bulbar and cortical neurons pulmonary neuroepithelial cells smooth muscle cells of pulmonary arteries and chemoreceptor cells While the precise mechanism underpinning oxygen sensing is not completely known several molecular entities have been proposed as possible oxygen sensors i e Hem proteins ion channels NADPH oxidase mitochondrial cytochrome oxidase Remarkably cellular adaptation to hypoxia is mediated by the master oxygen sensitive transcription factor hypoxia inducible factor 1 which can induce up regulation of different genes to cope the cellular effects related to a decrease in oxygen levels Short term responses to hypoxia included mainly chemoreceptor mediated reflex ventilatory and hemodynamic adaptations to manage the low oxygen concentration while more prolonged exposures to hypoxia can elicit more sustained physiological

responses including switch from aerobic to anaerobic metabolism vascularization and enhancement of blood O<sub>2</sub> carrying capacity The focus of this research topic is to provide an up to date vision on the current knowledge on oxygen sensing mechanism physiological responses to acute or chronic hypoxia and cellular tissue organ adaptations to hypoxic environment
