Vaughn, 1993 These proceedings begin with an introductory section that deals with the definition framework and role of biologically based control with emphasis on development of a holistic systems approach to lead the field into the 21st century The following five sections include papers on biocontrol agents for suppression of insects biocontrol agents for suppression of plant pathogens biocontrol agents for suppression of weeds natural compounds in pest management and genetic manipulation of biocontrol agents The last section deals with implementation of needs issues and challenges Annotation copyright by Book News Inc Portland OR *Biologically based technologies for pest control.*, 1995

Biologically Based Technologies for Pest Control Office of Technology Assessment, 2005 This report examines an array of the biologically based tools that underpin effective IPM integrated pest management It is divided into sections on context technologies risks and regulations from research to implementation and commercial considerations **Ecologically Based Pest Management** Committee on Pest and Pathogen Control Through Management of Biological Control Agents and Enhanced Cycles and Natural Processes, Board on Agriculture, National Research Council, 1996-04-04 Widespread use of broad spectrum chemical pesticides has revolutionized pest management But there is growing concern about environmental contamination and human health risks and continuing frustration over the ability of pests to develop resistance to pesticides In Ecologically Based Pest Management an expert committee advocates the sweeping adoption of ecologically based pest management EBPM that promotes both agricultural productivity and a balanced ecosystem This volume offers a vision and strategies for creating a solid comprehensive knowledge base to support a pest management system that incorporates ecosystem processes supplemented by a continuum of inputs biological organisms products cultivars and cultural controls The result will be safe profitable and durable pest management strategies The book evaluates the feasibility of EBPM and examines how best to move beyond optimal examples into the mainstream of agriculture The committee stresses the need for information identifies research priorities in the biological as well as socioeconomic realm and suggests institutional structures for a multidisciplinary research effort Ecologically Based Pest Management addresses risk assessment risk management and public oversight of EBPM The volume also overviews the history of pest management from the use of sulfur compounds in 1000 B C to the emergence of transgenic technology Ecologically Based Pest Management will be vitally important to the agrichemical industry policymakers regulators and scientists in agriculture and forestry biologists researchers and environmental advocates and interested growers *Biologically Based Technologies For Pest Control* Roger C Herdman, 1998-01-01 Examines Biologically Based Tools Used In Integrated Pest Management Ipm Technologies Include Use Of Natural Predators And Parasites And Commercial Formulations Of Microbial Pesticides Contents Summary Context And Scope Current Use And Future Pote Biological Control of Pest and Vector Insects Vonnie D.C.

Rechcigl,Nancy A. Rechcigl,1999-09-24 Pest and disease management continues to challenge the agricultural community The rise in new pest and crop problems juxtaposed with public concern over pesticide use and more stringent environmental regulations creates the need for today s agricultural producers to stay current with new technologies for producing quality crops profitably Biological and Biotechnological Control of Insect Pests presents an overview of alternative measures to traditional pest management practices utilizing biological control and biotechnology The removal of some highly effective broad spectrum chemicals caused by concerns over environmental health and public safety has resulted in the development of alternative reduced risk crop protection products These products less toxic to the environment and easily integrated into biological control systems target specific life stages or pest species Predation recognized as a suitable long term strategy effectively suppresses pests in biotechnological control systems Biological and Biotechnological Control of Insect Pests covers these topics and more It explores the current approaches in alternative solutions such as biological control agents parasites and predators pathogenic microorganisms pheromones botanical insecticides genetic control genetic engineering of plants and biocontrol agents and government regulations for biocontrol agents and recombinant DNA technology This book will be a useful resource to entomologists agronomists horticulturists and environmental scientists **Emerging Technologies for Integrated Pest Management** George G. Huffaker, 2012-12-02 The Theory and Practice of Biological Control covers conventional biological control achievement in the major crop types and in public health problems Composed of five sections encompassing 28 chapters this book discusses the basic information concerning developments in other biologically based alternatives to chemical pesticides The first two sections discuss the philosophy theory scope history and the biological and ecological bases of biological control These sections also deal with the impact of predators and the host relationships of parasitoids and pathogens The following section presents the methodological aspects of biological control Discussions on the variability of natural enemies as encountered in biological control work the fitness of individuals and populations the ways fitness is being or can be influenced by importation procedures and the ability of imported natural enemies to adapt to the new environment are included The fourth section outlines the accomplishments of conventional biological control in various types of crops forests and public health areas Lastly the various components of integrated pest control other than conventional biological control that forms the essential ways used in the integrated control approach are covered in the last section of the book This book is an ideal source for plant pathologists and researchers microbiologists parasitologists and public health professionals

Biologically Based Technologies for Pest Control , 1995 The way the nation manages pests is changing because of efforts to reduce the reliance on conventional pesticides Driving this change is strong public opinion coupled with action by Congress and by federal and state agencies At the same time pest control needs are rising Many important pests are now resistant to formerly effective chemical controls And new pests continue to enter the country or spread to new locations where they threaten agriculture native ecosystems or human health The farmers foresters ranchers and others who seek to prevent excessive pest damage are increasingly aware of the shortcomings of conventional pest control approaches
