Quantitative Methods For Current Environmental Issues:

Quantitative Methods for Current Environmental Issues Clive W. Anderson, Vic Barnett, Philip C. Chatwin, Abdel H. El-Shaarawi, 2012-12-06 It is increasingly clear that good quantitative work in the environmental sciences must be genuinely interdisciplinary This volume the proceedings of the first combined TIES SPRUCE conference held at the University of Sheffield in September 2000 well demonstrates the truth of this assertion highlighting the successful use of both statistics and mathematics in important practical problems It brings together distinguished scientists and engineers to present the most up to date and practical methods for quantitative measurement and prediction and is organised around four themes spatial and temporal models and methods environmental sampling and standards atmosphere and ocean risk and uncertainty Quantitative Methods for Current Environmental Issues is an invaluable resource for statisticians applied mathematicians and researchers working on environmental problems and for those in government agencies and research institutes involved in the analysis of environmental issues

Environmental Statistics Vic Barnett, 2005-12-13 In modern society we are ever more aware of the environmental issues we face whether these relate to global warming depletion of rivers and oceans despoliation of forests pollution of land poor air quality environmental health issues etc At the most fundamental level it is necessary to monitor what is happening in the environment collecting data to describe the changing scene More importantly it is crucial to formally describe the environment with sound and validated models and to analyse and interpret the data we obtain in order to take action Environmental Statistics provides a broad overview of the statistical methodology used in the study of the environment written in an accessible style by a leading authority on the subject It serves as both a textbook for students of environmental statistics as well as a comprehensive source of reference for anyone working in statistical investigation of environmental issues Provides broad coverage of the methodology used in the statistical investigation of environmental issues Covers a wide range of key topics including sampling methods for extreme data outliers and robustness relationship models and methods time series spatial analysis and environmental standards Includes many detailed practical and worked examples that illustrate the applications of statistical methods in environmental issues Authored by a leading authority on environmental statistics
