Perspective In Theoretical Computer Science, A: Commemorative Volume For Gift Siromoney R

Narasimhan,1989-06-01 This volume consists of invited papers written by eminent researchers working in the areas of theoretical computer science The contents of the papers reflect the current trend of research being carried out in each of the areas Some of the areas featured are petri nets distributed systems map generating systems Lindenmayer systems logic cryptography graph grammars probabilistic automata array grammars and pattern recognition Many of these areas contain open problems and it is hoped that younger research workers will be motivated to work on them In addition some of the models designed constructed and presented are suitable for practical applications such as in computer graphics cryptography and distributed computing *A Perspective in Theoretical Computer Science* Raghavan Narasimhan,1989

Developments In Language Theory: Foundations, Applications, And Perspectives - Proceedings Of The 4th International Conference Grzegorz Rozenberg,W Thomas,2000-11-07 The theory of formal languages is one of the oldest branches of theoretical computer science Its original aim in the fifties and sixties was to clarify the laws and algorithms that underlie the definition and compilation of programming languages Since then formal language theory has changed very much Today it includes mathematical topics like combinatorics of words word equations and coding theory but it also covers connections to linguistics for example the study of contextual grammars new computational paradigms like DNA computing and a wide range of applications among them hypertext processing database theory and formal program verification Many of these themes of modern formal language theory are represented in this volume *Perspectives of System Informatics* Dines Bjørner,Manfred Broy,Alexandre Zamulin,2003-06-30 This book constitutes the thoroughly refereed post proceedings of the 4th International Andrei Ershov Memorial Conference PSI 2001 held in Akademgorodok Novosibirsk Russia in July 2001 The 50 revised papers presented together with 2 invited memorial papers devoted to the work of Andrei Ershov were carefully selected during 2 rounds of reviewing and improvement The book offers topical sections on computing and algorithms logical methods verification program transformation and synthesis semantics and types processes and concurrency UML specification Petri nets testing software construction data and knowledge bases logic programming constraint programming program analysis and language implementation **Perspectives of Systems Informatics** Andrei Voronkov,Irina

Virbitskaite,2007-08-04 This book constitutes the thoroughly refereed post conference proceedings of the 6th International Andrei Ershov Memorial Conference PSI 2006 held in Akademgorodok Novosibirsk Russia in June 2006 The 30 revised full papers and 10 revised short papers presented together with 5 invited papers address all current aspects of theoretical computer science programming methodology and new information technologies *Perspectives on Deduction:*

Contemporary Studies in the Philosophy, History and Formal Theories of Deduction Antonio Piccolomini

d'Aragona,2024-04-01 This book provides philosophers and logicians with a broad spectrum of views on contemporary

research on the problem of deduction its justification and explanation The variety of distinct approaches exemplified by the single chapters allows for a dialogue between perspectives that usually barely communicate with each other The contributions concern in a possibly intertwined way three major perspectives in logic philosophical historical formal The philosophical perspective has to do with the relationship between deductive validity and truth and questions the alleged conclusiveness of deduction and its epistemic contribution It also discusses the role of linguistic acts in deductive practice and provides a cognitive didactic contribution on how we may learn through deduction In the historical perspective the contributions discuss the ideas of some major historical figures such as Bolzano Girard G del and Peano Finally in the formal perspective the mathematics of deduction is dealt with mainly from an intuitionistic constructivist or proof theoretic point of view with focus on ecumenic or internalistic approaches to logical validity on the nature and identity of proofs and on dialogical setups Chapter 14 is available open access under a Creative Commons Attribution 4 0 International License via link.springer.com
