Perspectives On Industrial Ecology:

Perspectives on Industrial Ecology Dominique Bourg, Suren Erkman, 2017-09-29 Business as usual in terms of industrial and technological development even if based on a growing fear of pollution and shortages of natural resources will never deliver sustainable development. However, the growing interest in recent years in the new science of industrial ecology (IE) and the idea that industrial systems should mimic the quasi-cyclical functions of natural ecosystems in an industrial food chain holds promise in addressing not only short-term environmental problems but also the long-term holistic evolution of industrial systems. This possibility requires a number of key conditions to be met, not least the restructuring of our manufacturing and consumer society to reduce the effects of material and energy flows at the very point in history when globalisation is rapidly increasing them. This book sets out to address the theoretical considerations that should be made implicit in future research as well as practical implementation options for industry. The systematic recovery of industrial wastes, the minimisation of losses caused by dispersion, the dematerialisation of the economy, the requirement to decrease our reliance on fuels derived from hydrocarbons and the need for management systems that help foster inter-industry collaboration and networks are among the topics covered. The book is split into four sections. First, the various definitions of IE are outlined. Here, important distinctions are made between industrial metabolism and IE. Second, a number of different industrial sectors, including glass, petroleum and electric power, are assessed with regard to the operationalisation of industrial ecology. Eco-industrial Parks and Networks are also analysed. Third, the options for overcoming obstacles that stand in the way of the closing of cycles, such as the separation and screening of materials, are considered, and finally, a number of implications for the future are assessed. The contributions to *Perspectives on Industrial Ecology* come from the leading thinkers working in this field at the crossroads between a number of different disciplines: engineering, ecology, bio-economics, geography, the social sciences and law.

International Perspectives on Industrial Ecology Pauline Deutz, Donald I. Lyons, Jun Bi, 2015-10-30 With its high-level focus on industrial ecology-related policies such as circular economy and industrial symbiosis, this book provides a timely analysis of the industrial ecology experience worldwide. Editors Pauline Deutz, Donald I. Lyons and Jun Bi combine their diverse experiences in both research and teaching to examine the topic as a business community and academic endeavor in different settings worldwide. *International Perspectives on Industrial Ecology* provides a cutting-edge, in-depth exploration of the commonalities and differences of industrial ecology experiences, comparing geographical contexts from each of the world's continents. Expert contributors utilize case studies and contextualized reviews of current projects to formulate invaluable insights in the field. Much attention is given to industrial symbiosis, waste management, circular economy, sustainable development and environmental management as each pertains to the field. This book's international perspective makes it ideal background reading for academics working in industrial ecology as well as a valuable reference for postgraduates doing research or taking courses in the field.
