Q Schur Algebra:

The Q-Schur Algebra Stephen Donkin, 1998-12-10 This book focuses on the representation theory of q Schur algebras and connections with the representation theory of Hecke algebras and quantum general linear groups. The aim is to present from a unified point of view quantum analogs of certain results known already in the classical case. The approach is largely homological based on Kempf's vanishing theorem for quantum groups and the quasi hereditary structure of the q Schur algebras. Beginning with an introductory chapter dealing with the relationship between the ordinary general linear groups and their quantum analogies, the text goes on to discuss the Schur Functor and the 0 Schur algebra. The next chapter considers Steinberg's tensor product and infinitesimal theory. Later sections of the book discuss tilting modules, the Ringel dual of the q Schur algebra, Specht modules for Hecke algebras and the global dimension of the q Schur algebras. An appendix gives a self-contained account of the theory of quasi hereditary algebras and their associated tilting modules. This volume will be primarily of interest to researchers in algebra and related topics in pure mathematics.

The Q-Schur Algebra S. Donkin, 1999 This book focuses on the representation theory of q Schur algebras. **Schur Algebras and Representation Theory** Stuart Martin, 1993 The Schur algebra is an algebraic system providing a link between the representation theory of the symmetric and general linear groups both finite and infinite. In the text Dr Martin gives a full self-contained account of this algebra and these links covering both the basic theory of Schur algebras and related areas. He discusses the usual representation theoretic topics such as constructions of irreducible modules, the blocks containing them, their modular characters and the problem of computing decomposition numbers; moreover deeper properties such as the quasi hereditariness of the Schur algebra are discussed. The opportunity is taken to give an account of quantum versions of Schur algebras and their relations with certain q deformations of the coordinate rings of the general linear group. The approach is combinatorial where possible, making the presentation accessible to graduate students. This is the first comprehensive text in this important and active area of research; it will be of interest to all research workers in representation theory.

The Q-Schur Algebra S. Donkin, 1998 *A Double Hall Algebra Approach to Affine Quantum Schur-Weyl Theory* Bangming Deng, Jie Du, Qiang Fu, 2012-12-06 The first book of its kind to present an algebraic approach to affine q Schur algebras and affine quantum Schur-Weyl theory. **Algebraic Groups and Quantum Groups** Susumu Ariki, 2012 This volume contains the proceedings of the tenth international conference on Representation Theory of Algebraic Groups and Quantum Groups held August 2-6 2010 at Nagoya University Nagoya Japan. The survey articles and original papers contained in this volume offer a comprehensive view of current developments in the field. Among others reflecting recent trends, one central theme is research on representations in the affine case. In three articles the authors study representations of W algebras and affine Lie algebras at the critical level and three other articles are related to crystals in the affine case: that is, Mirkovic-Vilonen polytopes for affine type A and Kerov-Kirillov-Reshetikhin type bijection for affine

type E₆ Other contributions cover a variety of topics such as modular representation theory of finite groups of Lie type quantum queer super Lie algebras Khovanov's arc algebra Hecke algebras and cyclotomic q -Schur algebras G_2 -T Verma modules for reductive algebraic groups equivariant K theory of quantum vector bundles and the cluster algebra This book is suitable for graduate students and researchers interested in geometric and combinatorial representation theory and other related fields

Representations of Finite Dimensional Algebras and Related Topics in Lie Theory and Geometry Vlastimil Dlab, Claus Michael Ringel, These proceedings are from the Tenth International Conference on Representations of Algebras and Related Topics ICRA X held at The Fields Institute In addition to the traditional instructional workshop preceding the conference there were also workshops on Commutative Algebra Algebraic Geometry and Representation Theory Finite Dimensional Algebras Algebraic Groups and Lie Theory and Quantum Groups and Hall Algebras These workshops reflect the latest developments and the increasing interest in areas that are closely related to the representation theory of finite dimensional associative algebras Although these workshops were organized separately their topics are strongly interrelated The workshop on Commutative Algebra Algebraic Geometry and Representation Theory surveyed various recently established connections such as those pertaining to the classification of vector bundles or Cohen-Macaulay modules over Noetherian rings coherent sheaves on curves or ideals in Weyl algebras In addition methods from algebraic geometry or commutative algebra relating to quiver representations and varieties of modules were presented The workshop on Finite Dimensional Algebras Algebraic Groups and Lie Theory surveyed developments in finite dimensional algebras and infinite dimensional Lie theory especially as the two areas interact and may have future interactions The workshop on Quantum Groups and Hall Algebras dealt with the different approaches of using the representation theory of quivers and species in order to construct quantum groups working either over finite fields or over the complex numbers In particular these proceedings contain a quite detailed outline of the use of perverse sheaves in order to obtain canonical bases The book is recommended for graduate students and researchers in algebra and geometry

Iwahori-Hecke Algebras and Schur Algebras of the Symmetric Group Andrew Mathas,1999 This volume presents a fully self contained introduction to the modular representation theory of the Iwahori Hecke algebras of the symmetric groups and of the q Schur algebras The study of these algebras was pioneered by Dipper and James in a series of landmark papers The primary goal of the book is to classify the blocks and the simple modules of both algebras The final chapter contains a survey of recent advances and open problems The main results are proved by showing that the Iwahori Hecke algebras and q Schur algebras are cellular algebras in the sense of Graham and Lehrer This is proved by exhibiting natural bases of both algebras which are indexed by pairs of standard and semistandard tableaux respectively Using the machinery of cellular algebras which is developed in chapter 2 this results in a clean and elegant classification of the irreducible representations of both algebras The block theory is approached by first proving an analogue of the Jantzen sum formula for the q Schur algebras This book is the first of its kind covering the topic It offers a substantially simplified treatment of the original proofs The book is a solid

reference source for experts It will also serve as a good introduction to students and beginning researchers since each chapter contains exercises and there is an appendix containing a quick development of the representation theory of algebras A second appendix gives tables of decomposition numbers
