Quantum Manybody Systems In One Dimension:

Non-equilibrium Dynamics of One-Dimensional Bose Gases Tim Langen, 2015-05-22 This work presents a series of experiments with ultracold one dimensional Bose gases which establish said gases as an ideal model system for exploring a wide range of non equilibrium phenomena With the help of newly developed tools like full distributions functions and phase correlation functions the book reveals the emergence of thermal like transient states the light cone like emergence of thermal correlations and the observation of generalized thermodynamic ensembles This points to a natural emergence of classical statistical properties from the microscopic unitary quantum evolution and lays the groundwork for a universal framework of non equilibrium physics The thesis investigates a central question that is highly contested in quantum physics how and to which extent does an isolated quantum many body system relax This question arises in many diverse areas of physics and many of the open problems appear at vastly different energy time and length scales ranging from high energy physics and cosmology to condensed matter and quantum information A key challenge in attempting to answer this question is the scarcity of quantum many body systems that are both well isolated from the environment and accessible for experimental study

FUNDAMENTALS OF PHYSICS - Volume II José L. Mora-Lopez, 2009-11-10 Fundamentals of Physics is a component of Encyclopedia of Physical Sciences Engineering and Technology Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty Encyclopedias The Theme on Fundamentals of Physics provides an overview of the modern areas in physics most of which had been crystallized in the 20th century is given The Theme on Fundamentals of Physics deals in three volumes and cover several topics with a myriad of issues of great relevance to our world such as Historical Review of Elementary Concepts in Physics Laws of Physical Systems Particles and Fields Quantum Systems Order and Disorder in Nature Topical Review Nuclear Processes which are then expanded into multiple subtopics each as a chapter These three volumes are aimed at the following five major target audiences University and College Students Educators Professional Practitioners Research Personnel and Policy Analysts Managers and Decision Makers NGOs and GOs

Large-Scale Scientific Computing Ivan Lirkov, 2006-02-14 This book constitutes the thoroughly refereed post proceedings of the 5th International Conference on Large Scale Scientific Computations LSSC 2005 held in Sozopol Bulgaria in June 2005 The 75 revised full papers presented together with five invited papers were carefully reviewed and selected for inclusion in the book The papers are organized in topical sections

Non-Equilibrium Dynamics Beyond Dephasing Bernhard Rauer, 2019-05-04 Cold atomic gases trapped and manipulated on atom chips allow the realization of seminal one dimensional 1d quantum many body problems in an isolated and well controlled environment In this context this thesis presents an extensive experimental study of non equilibrium dynamics in 1d Bose gases with a focus on processes that go beyond simple dephasing dynamics It reports on the observation of recurrences of coherence in the post quench dynamics of a pair of 1d Bose gases and presents a detailed study of their decay The latter represents the first observation of phonon

phonon scattering in these systems Furthermore the thesis investigates a novel cooling mechanism occurring in Bose gases subjected to a uniform loss of particles Together the results presented show a wide range of non equilibrium phenomena occurring in 1d Bose gases and establish them as an ideal testbed for many body physics beyond equilibrium I. Ya Pomeranchuk And Physics At The Turn Of The Century, Proceedings Of The International Conference Alexander Berkov, Nikolay B Narozhny, Lev Borisovich Okun, 2004-02-09 This conference was dedicated to the memory of the great scientist and teacher I Ya Pomeranchuk on the occasion of his 90th birthday It was multidisciplinary and covered those fields of physics where Pomeranchuk made outstanding contributions including high energy physics quantum field theory theory of liquid helium condensed matter physics physics of electromagnetic processes in matter and astrophysics Most of the plenary talks and reports were given by Pomeranchuk's former students and coworkers The proceedings volume provides an excellent review of some important areas of modern physics and reflects the Pomeranchuk school's contributions to modern physics It is useful for graduate students lecturers and researchers in high energy physics quantum field theory and condensed matter physics The proceedings have been selected for coverage in Index to Scientific Technical Proceedings ISTP ISI Proceedings Index to Scientific Technical Proceedings ISTP CDROM version ISI Proceedings Deutsche Nationalbibliographie und Bibliographie der im Ausland erschienenen deutschsprachigen Veröffentlichungen, 1996

Quantum Many-body Systems In One Dimension Zachary N C Ha, 1996-09-13 The main theme of the book is the intimate connection between the two families of exactly solvable models the inverse square exchange ISE and the nearest neighbor exchange NNE models The latter are better known as the Bethe Ansatz solvable models and include the Heisenberg spin chain t J models and Hubbard models The former the Calogero Sutherland family of models are simple to solve and contain essentially the same physics as the NNE family The author introduces and discusses current topics such as the Luttinger liquid concept fractional statistics and spin charge separation in the context of the explicit models *Journal of the Physical Society of Japan*, 2018 **Ground-state Properties of One-dimensional Systems and the Physics of the Coulomb Blockade** Xiaoya Qi, 2003 **Quantum Computers, Algorithms, and Chaos** Giulio Casati, Dima L.
