*Quantum Chemistry, 2/e* Awode, Mahendra R., For B Sc M Sc B E and B Tech and other Competitive Examinations Includes 112 solved problems also **The Nature of Temporal ( $t > 0$ ) Science** Francis T.S. Yu, 2022-04-25 The author has shown that practically all our laws principles and theories are not physically realizable since they were derived from an empty space paradigm From which this book is started with the origin of our temporal  $t = 0$  universe it shows that temporal subspace is a physically realizable space within our universe As in contrasted with generally accepted paradigm where time is an independent variable From which the author has shown that it is not how rigorous mathematics is but it is the temporal  $t = 0$  space paradigm determines the physically realizable solution Although Einstein's relativity and Schrödinger's principle had revolutionized the modern science this book has shown that both theory and principle are physically non realizable since they were developed from an empty space paradigm One of the most important contribution of this book must be the revolutionary idea of our temporal  $t = 0$  space for which the author has shown that absolute certainty exists only at the present  $t = 0$  moment Where past time information has no physical substance and future time represents a physically realizable yet uncertainty From which the author has shown that all the existent laws principles and theories were based on past time certainties to predict the future but science is supposed to be approximated The author has also shown that this is precisely our theoretical science was developed But time independent laws and principles are not existed within our temporal universe in view of the author's temporal exclusive principle By which the author has noted that timeless science has already created a worldwide conspiracy for examples such as superposition principle qubit information relativity theory wormhole travelling and many others This book has also shown that Heisenberg's uncertainty is an observational principle independent with time yet within our universe everything changes with time In this book the author has also noted that micro space behaviors the same as macro space regardless of the particle size Finally one of interesting feature is that that big bang creation was ignited by a self induced gravitational force instead by time as commonly believed Nevertheless everything has a price to pay a section of time  $t$  and an amount of energy  $E$  and it is not free The author has also shown that time is the only variable that cannot be changed Although we can squeeze a section of time  $t$  as small as we wish but we can never able to squeeze  $t$  to zero even we have all the needed energy Nevertheless this revolutionary book closer to the truth is highly recommended to every scientist and engineer otherwise we will forever be trapped within the timeless fantasyland of science This book is intended for cosmologists particle physicists astrophysicists quantum physicists computer scientists optical scientists communication engineers professors and students as a reference or a research oriented book **Decolonizing Science and Modernity in South Asia** Sahara Ahmed, Suvabrata Sarkar, 2024-09-19 This book offers a unique perspective on the colonial roots of modern science technology and medicine STM in South Asia The book questions the deconstruction of imperial visions and definitions of science and modernity in South Asia It presents an in depth analysis of the contested
