Selected Papers Of Abdus Salam:

Selected Papers of Abdus Salam Abdus Salam, Ahmed Ali, 1994 This is a selection from over 250 papers published by Abdus Salam Professor Salam has been Professor of Theoretical Physics at Imperial College London and Director of the International Centre for Theoretical Physics in Trieste for which he was largely responsible for creating He is one of the most distinguished theoretical physicists of his generation and won the Nobel Prize for Physics in 1979 for his work on the unification of electromagnetic and weak interactions He is well known for his deep interest in the development of scientific research in the third world to which ICTP is devoted and has taken a leading part in setting up the Third World Academy His research work has ranged widely over quantum field theory and all aspects of the theory of elementary particles and more recently into other fields including high temperature superconductivity and theoretical biology The papers selected represent a cross section of his work covering the entire period of 50 years from his student days to the present

Selected Papers on Gauge Theory of Weak and Electromagnetic Interactions C. H. Lai, 1981 A volume of selected original papers on the synthesis of the two fundamental forces of nature It is intended to provide graduate students and physicists in the field with an easy access to the original literature

Creation Of Quantum Chromodynamics And The Effective Energy, The: In Honour Of A Zichichi On The Occasion Of The Galvani Bicentenary Celebrations L N Lipatov, Gabriele Veneziano, Gerard 't Hooft, Vladimir N Gribov, Victor F Weisskopf, 2001-01-03 UNDER THE SPELL OF THE GAUGE PRINCIPLE by G 't Hooft The University of Bologna and its Academy of Sciences in collaboration with the Italian National Institute for Nuclear Physics and the Italian Physical Society celebrated in 1998 the bicentenary of a great pioneer in the field of electric phenomena Luigi Galvani the father of macroelectricity During these two centuries the physics of electric phenomena has given rise first to the Maxwell equations then to quantum electrodynamics and finally to the synthesis of all reproducible phenomena the Standard Model A cornerstone of the Standard Model is quantum chromodynamics QCD which describes the interaction between quarks and gluons in the innermost part of the structure of matter The discovery of QCD will be recalled in the future as one of the greatest achievements of mankind Many physicists the world over have contributed to its creation on both the experimental and the theoretical front Professor Antonino Zichichi has played an important role in this scientific venture as documented by his works which are reproduced in this invaluable volume One of the founders of European physics Professor Victor F Weisskopf contributes with his memories of the time when QCD had many problems This volume owes its existence to a founding father of QCD Professor Vladimir N Gribov whose sudden demise prevented him from directly contributing to its final edition Two world leaders in subnuclear theoretical physics Professors Gerardus 't Hooft and Gabriele Veneziano illustrate the significance of the contributions of Antonino Zichichi in QCD

Collected Works Of Lars Onsager, The (With Commentary) Per Chr Hemmer, Helge Holden, Signe Kjelstrup, 1996-08-30 This volume contains the collected works of the eminent chemist and physicist Lars Onsager one of the most influential scientists of the 20th Century The volume includes

Onsager's previously unpublished PhD thesis a biography by H C Longuet Higgins and M E Fisher an autobiographical commentary selected photographs and a list of Onsager's discussion remarks in print. Onsager's scientific achievements were characterized by deep insights into the natural sciences. His two best known accomplishments are his reciprocal relations for irreversible processes for which he received the 1968 Nobel Prize in Chemistry and his explicit solution of the two-dimensional Ising model, a mathematical tour de force that created a sensation when it appeared. In addition, he made significant theoretical contributions to other fields including electrolytes, colloids, superconductivity, turbulence, ice, electrons in metals, and dielectrics. In this volume, Onsager's contributions are divided into the following fields: irreversible processes, the Ising model, electrolytes, colloids, helium II, and vortex quantization, off-diagonal long-range order, and flux quantization, electrons in metal, turbulence, ion recombination, fluctuation theory, dielectrics, ice, and water, biology, Mathieu functions. The different fields are evaluated by leading experts. The commentators are P W Anderson, R Askey, A Chorin, C Domb, R J Donnelly, W Ebeling, J C Justice, H N W Lekkerkerker, P Mazur, H P McKean, J F Nagle, T Odijk, A B Pippard, G Stell, G H Weiss, and C N Yang.

Subnuclear Physics, the First 50 Years: Highlights From Erice To El N O Barnabei, P Pupillo, Fabio Roversi Monaco, Antonino Zichichi, 2000-08-04. For the Galvani Bicentenary Celebrations, the University of Bologna and its Academy of Sciences singled out subnuclear physics as the field of scientific research to be associated with this important event, as it would best illustrate for the new generation of students the challenge inherent in fundamental sciences. Subnuclear physics was born 50 years ago and has represented ever since the new frontiers of Galilean science. In his opening lecture delivered on the first day of the new academic year, Professor Antonino Zichichi analytically reviewed the basic conceptual developments and main discoveries achieved in subnuclear physics during the last 50 years. Given the importance of this field of fundamental research, Professor Zichichi was invited to expand the contents of his lecture into a book, and the outcome is this invaluable volume.

The Legacy Of Leon Van Hove Alberto Giovannini, 2000-11-07. This important volume describes the wide-ranging scientific activities of Leon Van Hove through commentaries by his colleagues and a selection of his most influential papers and documents. The reprinted papers are grouped by topic, starting from his early work in mathematics and theoretical and statistical physics up to his very last contributions in elementary particle physics and multiparticle dynamics. Van Hove's career as teacher, director, and science advisor in many European institutions is presented in sketches by friends and coworkers. A selection of his speeches and documented thoughts on science completes the volume.

From the Preshower to the New Technologies for Supercolliders Bjørn H. Wiik, 2002. In the year 2000, the city of Bologna was the European Capital for Culture. For this reason, the University of Bologna and its Academy of Sciences, following the Guglielmo Marconi Centenary and the Luigi Galvani Bicentenary Celebrations, decided to call attention to the major achievements of their most distinguished members in science and technology. This invaluable volume presents a series of inventions and technological developments, some thought of and directly implemented by Professor Antonino Zichichi, others suggested and

developed under his leadership all of them having contributed to the discovery of new particles and new phenomena in the field of subnuclear physics The book was conceived by an eminent scientist Professor Dr Bj rn H Wiik Director of Germany s most prestigious physics laboratory DESY Hamburg It would not be published were it not for Professor Dr Albrecht Wagner Chairman of the DESY Board of Directors and Dr Horst Wenninger from CERN Geneva the greatest European physics laboratory

The Origin Of The Third Family O Barnabei,Fabio Roversi Monaco,Luciano Maiani,R A Ricci,1998-06-04 In 1967 a group of physicists from the University of Bologna led by A Zichichi published a proposal to search for a heavy lepton using the Frascati e e collider The proposal whose key pages are reproduced in this book on the 30th anniversary of the publication was the consequence of many years of work started at CERN where in addition to the original idea of searching for a heavy lepton carrying its own leptonic number new technologies were invented to allow the detection of a signal whose identification against the high background of hadronic processes was extremely difficult More than ten years of work by A Zichichi together with his students and his collaborators have paved the way for the discovery of the Third Family of fundamental particles In this authoritative volume a group of eminent physicists unequivocally establishes the origin of the Third Family of the basic constituents of matter
