Selected Papers of Hirotugu Akaike Emanuel Parzen, Kunio Tanabe, Genshiro Kitagawa, 1997-12-12 **Selected Papers of Hirotugu Akaike** Hirotugu Akaike, Emanuel Parzen, Kunio Tanabe, Genshiro Kitagawa, 1998 Hirotugu Akaike is an internationally renowned researcher who profoundly affected how data and time series are analyzed and modeled His pioneering work is highly regarded and his talc method is frequently cited and applied in almost every area of the physical and social sciences This book includes groundbreaking papers representing successive phases of Akaike s research which spanned more than 40 years **Hypothesis Testing and Model Selection in the Social Sciences** David L. Weakliem, 2016-04-25 Examining the major approaches to hypothesis testing and model selection this book blends statistical theory with recommendations for practice illustrated with real world social science examples It systematically compares classical frequentist and Bayesian approaches showing how they are applied exploring ways to reconcile the differences between them and evaluating key controversies and criticisms The book also addresses the role of hypothesis testing in the evaluation of theories the relationship between hypothesis tests and confidence intervals and the role of prior knowledge in Bayesian estimation and Bayesian hypothesis testing Two easily calculated alternatives to standard hypothesis tests are discussed in depth the Akaike information criterion AIC and Bayesian information criterion BIC The companion website www.guilford.com/weakliem/materials/ital supplies data and syntax files for the book s examples Model Selection and Multimodel Inference Kenneth P. Burnham, David R. Anderson, 2007-05-28 A unique and comprehensive text on the philosophy of model based data analysis and strategy for the analysis of empirical data The book introduces information theoretic approaches and focuses critical attention on a priori modeling and the selection of a good approximating model that best represents the inference supported by the data It contains several new approaches to estimating model selection uncertainty and incorporating selection uncertainty into estimates of precision An array of examples is given to illustrate various technical issues The text has been written for biologists and statisticians using models for making inferences from empirical data *Model Selection and Inference* Kenneth P. Burnham, David R. Anderson, 2013-11-11 We wrote this book to introduce graduate students and research workers in various scientific disciplines to the use of information theoretic approaches in the analysis of empirical data In its fully developed form the information theoretic approach allows inference based on more than one model including estimates of unconditional precision in its initial form it is useful in selecting a best model and ranking the remaining models We believe that often the critical issue in data analysis is the selection of a good approximating model that best represents the inference supported by the data an estimated best approximating model In information theory includes the well known Kullback Leibler distance between two models actually probability distributions and this represents a fundamental quantity in science In 1973 Hirotugu Akaike derived an estimator of the relative Kullback Leibler distance based on Fisher s maximized log likelihood His mea sure now called Akaike s information criterion AIC

provided a new paradigm for model selection in the analysis of empirical data His approach with a fundamental link to information theory is relatively simple and easy to use in practice but little taught in statistics classes and far less understood in the applied sciences than should be the case We do not accept the notion that there is a simple true model in the biological sciences
