Collected Works of William P. Thurston with Commentary Benson Farb, David Gabai, Steven P.

Kerckhoff, 2023-06-08 William Thurston's work has had a profound influence on mathematics. He connected whole mathematical subjects in entirely new ways and changed the way mathematicians think about geometry, topology, foliations, group theory, dynamical systems, and the way these areas interact. His emphasis on understanding and imagination in mathematical learning and thinking are integral elements of his distinctive legacy. This four-part collection brings together in one place Thurston's major writings, many of which are appearing in publication for the first time. Volumes I-III contain commentaries by the Editors. Volume IV includes a preface by Steven P. Kerckhoff. Volume III contains William Thurston's papers on dynamics and computer science and papers written for general audiences. Additional miscellaneous papers are also included, such as his 1967 New College undergraduate thesis which foreshadows his later work.

The Selected Works of Phillip A. Griffiths with Commentary: Algebraic geometry Phillip Griffiths, 2003

[The Selected Works of Phillip A. Griffiths with Commentary](#) Phillip Griffiths, 2003 Over the last four decades, Phillip Griffiths has been a central figure in mathematics. During this time, he made crucial contributions in several fields, including complex analysis, algebraic geometry, and differential systems. His books and papers are distinguished by a remarkably lucid style that invites the reader to understand not only the subject at hand but also the connections among seemingly unrelated areas of mathematics. Even today, many of Griffiths' papers are used as a standard source on a subject. Another important feature of Griffiths' writings is that they often bring together classical and modern mathematics. The four parts of *Selected Works*—Analytic Geometry, Algebraic Geometry, Variations of Hodge Structures, and Differential Systems—are organized according to the subject matter and are supplemented by Griffiths' brief but extremely illuminating personal reflections on the mathematical content and the times in which they were produced. Griffiths' *Selected Works* provide the reader with a panoramic view of important and exciting mathematics during the second half of the 20th century.

Milnor, 1994 *The Selected Works of Phillip A. Griffiths with Commentary: Differential systems* Phillip Griffiths, 2003

The Selected Works of Sigurdur Helgason Sigurdur Helgason, 2009 Sigurdur Helgason is a leading expert in harmonic analysis and integral geometry on symmetric spaces. His work has had and continues to have a profound influence on the field. Helgason's work is marked by an interplay of analysis, geometry, and representation theory. The articles collected here cover invariant differential operators, geometric properties of solutions to differential equations on symmetric spaces, double fibrations in integral geometry, spherical functions, and spherical transforms, duality for symmetric spaces, representation theory, and the Fourier transform on G/K . The papers are supplemented by an introductory essay by Helgason. This selection of Sigurdur Helgason's important papers will be a valuable resource to research mathematicians and graduate students.
