Sexual Selections Marlene Zuk,2002-06-04 Scientific discoveries about the animal kingdom fuel ideological battles on many fronts especially battles about sex and gender We now know that male marmosets help take care of their offspring Is this heartening news for today s stay at home dads Recent studies show that many female birds once thought to be monogamous actually have chicks that are fathered outside the primary breeding pair Does this information spell doom for traditional marriages And bonobo apes take part in female female sexual encounters Does this mean that human homosexuality is natural This highly provocative book clearly shows that these are the wrong kinds of questions to ask about animal behavior Marlene Zuk a respected biologist and a feminist gives an eye opening tour of some of the latest developments in our knowledge of animal sexuality and evolutionary biology Sexual Selections exposes the anthropomorphism and gender politics that have colored our understanding of the natural world and shows how feminism can help move us away from our ideological biases As she tells many amazing stories about animal behavior whether of birds and apes or of rats and cockroaches Zuk takes us to the places where our ideas about nature gender and culture collide Writing in an engaging conversational style she discusses such politically charged topics as motherhood the genetic basis for adultery the female orgasm menstruation and homosexuality She shows how feminism can give us the tools to examine sensitive issues such as these and to enhance our understanding of the natural world if we avoid using research to champion a feminist agenda and avoid using animals as ideological weapons Zuk passionately asks us to learn to see the animal world on its own terms with its splendid array of diversity and variation This knowledge will give us a better understanding of animals and can ultimately change our assumptions about what is natural normal and even possible *Nature humaine et évolution bio-culturelle* ,1986 **Human Nature and Biocultural Evolution** Joseph Lopreato,2024-12-02 First published in 1984 Human Nature and Biocultural Evolution aims to delineate a theory of human nature viewed as an interrelated set of genetically programmed behavioral predispositions and a theory of biocultural evolution The author s approach is based on the hypothesis that innate predispositions and cultural environmental factors cooperate to determine human behavior and socio cultural forms Professor Lopreato begins by tracing the development of evolutionary biology up to sociobiology It is his argument that the social and biological disciplines have for over a century been moving towards a synthesis and that Homo sapiens is neither just another animal nor so unique a being that culture has become divorced from its genetic underpinnings The argument is supported with evidence from evolutionary biology and social science with a critical discussion of basic issues of behavioral science and with an analysis of certain famous theories in social science e g theories of suicide anomie capitalism which prove to be richer and more complete when viewed from a biocultural perspective The theory of human nature is arrived at through a rich analysis of ethnographic psychological and sociological arguments and data as well as

facts and theories from comparative zoology In the process the author treats critically numerous theoretical problems associated with topics such as exploitation class consciousness structured inequality reciprocal behavior territorial aggression religious ritual socialization ethnicity and prejudice The author concludes with an examination of behavioral predispositions that are hypothesized to be at the base of cultural variation

Biosocial Perspectives on the Family Erik E. Filsinger, 1988-07 The resurgence of interest in

biological explanations of human behaviour has stimulated family scholars to challenge many current cultural and environmental explanations *Biosocial Perspectives on the Family* brings together the findings and views of some of the foremost researchers on the biological influences on family behaviour from many academic disciplines including sociology psychology and anthropology The selection of chapters represents a continuum from the more proximal theories of biological input to the more distal evolutionary explanations The final three chapters serve as a critique of the other chapters

Animal Poeta Karl Eibl, 2004 Die

kulturwissenschaftliche Rezeption der Biologie ist vor 60 Jahren bei Arnold Gehlen stehen geblieben Deshalb gibt das Buch zunächst eine kritische Einführung in die beiden wichtigsten neueren Entwicklungen der Verhaltensbiologie in die Soziobiologie und in die Evolutionäre Psychologie Auf dieser Basis werden dann die drei Schulen errichtet die eine biologische Kultur und Literaturtheorie tragen sollen 1 Das Zusammenwirken von genetischen Dispositionen und kultureller Umwelt wird darauf zurückgeführt dass die biologischen Verhaltensprogramme des Menschen unter dem Druck wechselnder Umwelten Suchimpulse entwickelt haben die mit kulturellen Informationen beantwortet werden daher die Formbarkeit der kulturbezogenen Programme d.h. die Möglichkeit in extrem variablen Milieus erfolgreich zu agieren 2 Aus der ursprünglich trifunktionalen Protosprache der menschenähnlichen Tiere hat sich im Laufe der menschlichen Evolution die Möglichkeit

einer Isolierung des Sachbezugs ausdifferenziert. Damit können mentale Einheiten von den Personen abgelöst und in den Status von Gegenständen versetzt werden. Diese Leistung der Vergegenständlichung bildet die Grundlage sowohl für den spezifisch menschlichen kaskadierenden Kulturtyp als auch die Möglichkeit der reflektierenden Selbstvergegenständlichung. Wichtigstes Mittel der strukturierten Speicherung von Informationen wird das Erzählen. 3 Die Argumentationslinie wird bis zu Kunst und poetischer Literatur durchgezogen. Damit kommt ein verhaltensbiologischer Sachverhalt in den Blick, der von den Evolutionsbiologen notorisch unterbelichtet wird. Der evolutive Stress-Lust-Mechanismus, der das alte Paradigma des Klauen und Zähne-Darwinismus relativieren und ergänzen kann. *Books in Print*, 1991. **Anthropological Literature**, 1979. Describes articles and essays on anthropology and archaeology including art history, demography, economics, psychology and religious studies. Indexes articles two or more pages long in works published in English and other European languages. Internet version covers from the 19th century to the present. *Biology of Animal Behavior* James W. Grier, 1984. *Journal of Ritual Studies*, 2005. *Review of Personality and Social Psychology* Ladd Wheeler, 1981-07-01. The first volume of the *Review of Personality and Social Psychology* focusses on the frontiers of theory and method in personality and social psychology. The international contributors summarize and integrate established areas and explore those emerging topics which have a sufficient base of theoretical and empirical work. Compared with reviews of more traditional topics, the present contributions are not so heavily weighted with research findings which makes for a more fluent style and greater scope for speculative comment. *Personality Individual Differences* Vol 4, 1983. *Biopolitics and International Values* Ralph Pettman, 1981. *Biopolitics and International Values*. Investigating Liberal Norms attempts to provide as profound an understanding of human behavior as possible. It sorts out the subjective meanings we share with other people that define our cultures and the symbolic contexts that surround us all. The book begins with a discussion of the sources of order in contemporary world politics, in particular the intellectual and moral values that have come to prevail there: the European doctrines of social justice and human rights and the underlying assumptions they make about human fraternity, equality, liberty and
