Color and Light in Nature David K. Lynch, William Charles Livingston, 2001-06-11 We live in a world of optical marvels, from the commonplace but beautiful rainbow to the rare and eerie superior mirage. But how many of us really understand how a rainbow is formed, why the setting sun is red and flattened, or even why the sky at night is not absolutely black? This beautiful and informative guide provides clear explanations to all naturally occurring optical phenomena seen with the naked eye, including shadows, halos, water optics, mirages, and a host of other spectacles. Separating myth from reality, it outlines the basic principles involved and supports them with many figures and references. A wealth of rare and spectacular photographs, many in full color, illustrate the phenomena throughout. In this new edition of the highly acclaimed guide to seeing, photographing, and understanding nature's optical delights, the authors have added over 50 new images and provided new material on experiments you can try yourself.
