Selected Topics in Algebraic Geometry, 1970 *Selected Topics in Algebraic Geometry* Virgil Snyder, 1970

Algebraic Geometry and Its Applications Shreeram Shankar Abhyankar, Chandrajit Bajaj, 1994 Algebraic Geometry and its Applications will be of interest not only to mathematicians but also to computer scientists working on visualization and related topics The book is based on 32 invited papers presented at a conference in honor of Shreeram Abhyankar's 60th birthday which was held in June 1990 at Purdue University and attended by many renowned mathematicians field medalists computer scientists and engineers The keynote paper is by G Birkhoff other contributors include such leading names in algebraic geometry as R Hartshorne J Heintz J I Igusa D Lazard D Mumford and J P Serre *Geometry of the Plane*

Cremona Maps Maria Alberich-Carraminana, 2002 This book provides a self contained exposition of the theory of plane Cremona maps reviewing the classical theory The book updates correctly proves and generalises a number of classical results by allowing any configuration of singularities for the base points of the plane Cremona maps It also presents some material which has only appeared in research papers and includes new previously unpublished results This book will be useful as a reference text for any researcher who is interested in the topic of plane birational maps *Selected Papers*

Adrian Bowyer, 1994 Describing the shapes of real objects for the purposes of engineering architecture medicine and a host of other disciplines often requires complicated mathematics and subtle computer techniques With contributions from eminent authorities in the field this wide ranging volume describes the latest research in computer aided surface geometry and design techniques currently being used and developed Topics include The geometry of helical canal surface optimized triangulation of parametric surfaces simple singularities in surface surface intersections and the volume function among others With its technical richness and comprehensive treatment of the subject the book will appeal to students and researchers working in CAD CAM architecture medical modeling molecular modeling geography cartography and landscape design *Geometric Modeling with Algebraic Surfaces* Chanderjit Bajaj, 1988 **Design and Application of Curves and Surfaces**

R. B. Fisher, 1994 This book brings together recent research results in the design and use of curve and surface methods as applied to engineering design and analysis problems and as used by computer vision scientists for description of image scene features Contributions are from both academics and industrialists and range from pure mathematics to experiences with the use of surface representations including mathematics of surfaces surface modelling curves and curve modelling and computer vision applications *Projective Duality and Homogeneous Spaces* Evgeni A. Tevelev, 2006-03-30 Projective duality is a very classical notion naturally arising in various areas of mathematics such as algebraic and

differential geometry combinatorics topology analytical mechanics and invariant theory and the results in this field were until now scattered across the literature Thus the appearance of a book specifically devoted to projective duality is a long awaited and welcome event Projective Duality and Homogeneous Spaces covers a vast and diverse range of topics in the field of dual varieties ranging from differential geometry to Mori theory and from topology to the theory of algebras It gives a very readable and thorough account and the presentation of the material is clear and convincing For the most part of the book the only prerequisites are basic algebra and algebraic geometry This book will be of great interest to graduate and postgraduate students as well as professional mathematicians working in algebra geometry and analysis
