Tsiolkovsky, 2004-11 Konstantin Tsiolkovsky is recognized throughout the world as the father of astronautics He was largely self educated and in later life worked under extremely difficult conditions in an atmosphere that combined indifference with hostility and ridicule But his extreme dedication to the idea of space flight never left him Tsiolkovsky was 60 years old when the October Revolution of 1917 took place yet most of his scientific papers were written after the revolution At the time of his death in 1935 they exceeded 500 The tremendous advances of soviet science and technology culminated in 1957 in the world s first spacecraft Sputnik I thus bringing to fruition the prophetic ideas of the great Russian pioneer of astronautics This volume contains a selection of some of Tsiolkovsky s more important scientific works

Jenkins, 2014-07-11 Access no single word better describes the primary concern of the exploration and development of space Every participant in space activities civil military scientific or commercial needs affordable reliable frequent and flexible access to space To Reach the High Frontier details the histories of the various space access vehicles developed in the United States since the birth of the space age in 1957 Each case study has been written by a specialist knowledgeable about the vehicle described and places each system in the larger context of the history of spaceflight The technical challenge of reaching space with chemical rockets the high costs associated with space launch the long lead times necessary for scheduling flights and the poor reliability of the rockets themselves show launch vehicles to be the space program s most difficult challenge      *Selected Works* Konstantin Tsiolkovskiĭ, 1968      **The British Library general catalogue of printed books to 1975** British Library, 1985      Joseph Needham, Ling Wang, 1954 For contents see Author Catalog      *General Catalogue of Printed Books* British Museum. Department of Printed Books, 1972      *Space Flight* Krafft A. Ehrlicke, 1960      **The Kremlin and the Cosmos** Nicholas Daniloff, 1972 This is the first book by a Westerner to trace the development of the Russian space program from its beginnings in the late nineteenth century through the enormous success of Sputnik to the crucial decision secretly arrived at and skillfully concealed not to continue in the race to place a man on the moon in the 1960 s Nicholas Daniloff who spent four years as a reporter in Moscow shows that the roots of Soviet space achievement run deep The theoretical foundation was laid around the turn of the century by the self taught scientist Konstantin E Tsiolkovsky who inspired a whole generation of pioneers in the 1930 s These same pioneers became the top scientists and administrators of the space program in the 1950 s and the 1960 s The author has drawn on public and private sources including information provided by defectors to the West to give us the most complete account thus far of the secret Soviet space apparatus the motivation and status and anonymity of the men who have provided its leadership the balance between scientific research weapons development and propaganda considerations the cost both in rubles and in lives of gaining an exploitable early lead over the Americans and the probable future course of the program including the real likelihood of Soviet initiatives toward joint Russian American cooperation in space exploration      **Konstantin Eduardovich Tsiolkovskiĭ** Arkadiĭ Aleksandrovich Kosmodemĭanskiĭ, 1985      **Dreams of the Earth and Sky** Konstantin Tsiolkovsky, 2017-02-13 Konstantin Tsiolkovsky was a Russian and Soviet rocket scientist and pioneer of the astronautic theory His works later inspired leading Soviet rocket engineers and contributed to the success of the Soviet space program Tsiolkovsky spent most of his life in a log house on the outskirts of Kaluga about 200 km southwest of Moscow A recluse by nature he appeared strange and bizarre to his fellow townsfolk This volume contains both his scientific and philosophical works      *To the End of the Solar System* James A. Dewar, 2004 Chemically propelled rockets can lift less than 5 percent of their take off weight into orbit a fact that could forever limit the space program Nuclear powered rockets however with their superior thrusting power and speed are radically different So argues James A Dewar in the only

comprehensive history ever written of the nuclear rocket project It is a story of political battles over the space program s future involving Presidents Eisenhower Kennedy Johnson and Nixon and a readable account of its technical successes a story perhaps more interesting and certainly more important Dewar believes than the history of atomic and H bomb development Dewar maintains that only by reestablishing a nuclear rocket project can the nation have a space program worthy of the 21st century one that makes reality of the hopes and dreams of science fiction     **The Soviet Review** ,1962     *Proceedings of the International Astronautical Congress* ,1982     **History of Rocketry and Astronautics** Donald C.
