Selecting Process Equipment:

Chemical Process Equipment Stanley M. Walas, 1988 Wales chemical and petroleum engineering U of Kansas presents a minimum of essential theory with numerical examples to illustrate the more involved procedures Emphasis is placed on short cut methods rules of thumb and data for design by analogy a short chapter on costs of equipment is included The introductory chapters will provide a general background to process design flowsheeting and process control Annotation copyrighted by Book News Inc Portland OR Handbook of Food Processing Equipment George D. Saravacos, Athanasios E. Kostaropoulos, 2002 This book covers the design selection and operation of industrial equipment used in the processing storage and packaging of foods Equipment design is based on the principles of transport phenomena and unit operations of Process Engineering and the physical and transport properties of foods Food quality and food safety aspects related to food processing equipment are emphasized Food processing equipment is classified and described according to the basic unit operations including mechanical transport mechanical processing and separations heat transfer operations evaporation dehydration thermal processing refrigeration freezing and mass transfer Special equipment used in food packaging and novel food processing is also described Typical numerical examples illustrate the sizing and selection of some important food processing equipment Selected equipment suppliers are also listed Chemical Process Equipment James R.
