This is an open access book. 2025 5th International Conference on Enterprise Management and Economic Development (ICEMED 2025) will be held in Dali, China, from May 30 to June 1, 2025. Enterprise management is the general term for a series of functions such as organizing, planning, commanding, supervising, and regulating the production and operation activities of enterprises. Relative to economic growth, economic development is the core concept of development economics. Economic development refers to the high-quality development of the economy, including quality and quantity, rather than merely the growth of quantity. Enterprise management covers economics, management, business management, financial management, human resource management, and other aspects and is a comprehensive interdisciplinary science that spans natural science, engineering science, technical science, and humanities and social science. Enterprise management comes into being with the development of modern socialized mass production. The use of modern management means and methods to manage enterprises ensures the survival and development of enterprises and plays a positive role in promoting economic development. ICEMED 2025 will bring together experts and scholars from relevant fields to discuss the relationship between enterprise management and economic development. Reasonable enterprise management is an important way to promote the economic development of enterprises. Scientific and reasonable use of industrial and commercial enterprise management knowledge can reasonably carry out effective macro control on the enterprise economy and ensure the stable progress and development of the enterprise economy.

 Central Station ,1916 *Hybrid & Electric Vehicle Progress* ,2003 **International Developments Towards Improved Car-sharing Services** Bodo Schwieger,2004 The main topic of this book is the introduction of a new mobility service One Way and Open End car sharing Dr Bodo Schwieger describes a process starting from the anticipation and

measurement of customer's needs to the introduction of innovative services. The described field test is second to none as it offers gasoline vehicles in a One Way rental scheme within an urban environment. 25 Smart vehicles were based at 8 stations and available to 4 000 car sharing customers. This service is being analyzed for efficiency and customer reactions. In a second step other car sharing companies in Hamburg, Germany, Seattle, Washington, Kyoto and Tokyo, Japan are analyzed for their approaches to improving their services, combines technological competence, marketing know how and customer analysis. Car sharing has recently become a highly relevant topic with the fast expansion of the American providers and the market entry of Deutsche Bahn AG and Shell AG in Germany. The method respects the large amount of interdependence with other services and also the multiplicity of different customer groups. Thus it can be transferred to other transportation services and used as a beginner's guide to service analysis. The book is based on the author's dissertation which was accepted at the Technical University of Berlin in 2003. It delivers on 150 pages densely accumulated information. It is worth reading for anyone who is involved in introducing and developing new services either within transportation or in related branches.
