Renewables Are Ready People Creating Renewable Energy Solutions:

Renewables are Ready--people Creating Renewable Energy Solutions Nancy Cole, Patrick J. Skerrett, 1995 The accomplishment of visionary individuals and citizen groups across the US **The Canadian Renewable Energy Guide** Solar Energy Society of Canada, 1999 *The Solar House* Daniel D. Chiras, 2002-10-01 Passive solar heating and passive cooling approaches known as natural conditioning provide comfort throughout the year by reducing or eliminating the need for fossil fuel Yet while heat from sunlight and ventilation from breezes is free for the taking few modern architects or builders really understand the principles involved Now Dan Chiras author of the popular book *The Natural House* brings those principles up to date for a new generation of solar enthusiasts The techniques required to heat and cool a building passively have been used for thousands of years Early societies such as the Native American Anasazis and the ancient Greeks perfected designs that effectively exploited these natural processes The Greeks considered anyone who didn't use passive solar to heat a home to be a barbarian In the United States passive solar architecture experienced a major resurgence of interest in the 1970s in response to crippling oil embargoes With grand enthusiasm but with scant knowledge and sometimes little common sense architects and builders created a wide variety of solar homes Some worked pretty well but looked more like laboratories than houses Others performed poorly overheating in the summer because of excessive or misplaced windows and skylights and growing chilly in the colder months because of insufficient thermal mass and insulation and poor siting In *The Solar House* Dan Chiras sets the record straight on the vast potential for passive heating and cooling Acknowledging the good intentions of misguided solar designers in the past he highlights certain egregious and entirely avoidable errors More importantly Chiras explains in methodical detail how today's home builders can succeed with solar designs Now that energy efficiency measures including higher levels of insulation and multi-layered glazing have become standard it is easier than ever before to create a comfortable and affordable passive solar house that will provide year-round comfort in any climate Moreover since modern building materials and airtight construction methods sometimes result in air quality and even toxicity problems Chiras explains state-of-the-art ventilation and filtering techniques that complement the ancient solar strategies of thermal mass and daylighting Chiras also explains the new diagnostic aids available in printed worksheet or software formats allowing readers to generate their own design schemes **Energy in American History** Jeffrey B. Webb, Christopher R. Fee, 2024-05-30 Contextualizes and analyzes the key energy transitions in U.S. history and the central importance of energy production and consumption on the American environment and in American culture and politics Focusing on the major energy transitions in U.S. history from the pre-industrial era to the present day this two-volume encyclopedia captures the major advancements events technologies and people synonymous with the production and consumption of energy in the United States Expert contributors show how for example the introduction of electricity and petroleum into ordinary American life facilitated periods of rapid social and political change as well as profound and ongoing

impacts on the environment These developments have in many ways defined and accelerated the pace of modern life and led to vast improvements in living conditions for millions of people just as they have also brought new fears of resource exhaustion and fossil fuel induced climate change Today as America begins to move beyond the use of fossil fuels toward a greater reliance on renewables including wind and solar energy there is a pressing need to understand energy in America's past in order to better understand its energy future *The Workbook*, 1996 *Environmental Science* Daniel D. Chiras, 2006 Completely updated the seventh edition of *Environmental Science* enlightens students on the fundamental causes of the current environmental crisis and offers ideas on how we as a global community can create a sustainable future

Living in the Environment George Tyler Miller, 1998 This book is designed to be used in introductory courses on environmental science It treats environmental science as an interdisciplinary study combining ideas and information from natural sources and social sciences *Permaculture International Journal*, 1996 **Beyond Fossil Fools** Joseph M. Shuster, 2008 *Beyond Fossil Fools* illustrates explains and quantifies the only practical solution to the energy problems of the United States and the world The solution is a combination of alternative energy sources reduced energy use hybrid and all electric cars and trucks improved batteries biofuels nuclear power political awareness and political willingness to change

The Rammed Earth House David Easton, 1996 *Rammed earth* construction is a step forward into a sustainable future when homes will combine pleasing aesthetics and intense practicality with a powerful sense of place *Rammed earth* homes are built entirely on site using basic elements earth water and a little cement The solid masonry walls permit design flexibility while providing year round comfort and minimal use of energy *Energy Alternatives* Gabriel Cruden, 2004 Energy drives all life and is a key component to how humanity works lives and sustains itself Due to the depletion of existing
