Reordering Of Nature Theology Society And The New Genetics:

Reordering Nature Celia Deane-Drummond, Bronislaw Szerszynski, Robin Grove-White, 2003-02-01 In this book experts in the environment theology and science argue that the challenge posed to society by biotechnology lies not only in terms of risk benefit analysis of individual genetic technologies and interventions but also has implications for the way we think about human identity and our relationship to the natural world Such a profound they would suggest religious challenge requires a response that is genuinely interdisciplinary in nature a conversation that draws as much on expertise in theology and philosophy as on the natural sciences and risk assessment techniques They argue that an adequate response must also be sociologically informed in at least two ways First it must draw on contemporary sociological insights about contemporary cultural change the complex role of expert knowledge in modern complex society and the specific social dynamics of contemporary technological risks Secondly it must endeavour to pay sensitive attention to the voice of the lay public in the current controversy over the new genetics This book attempts to realise such an aim as a contribution not just to academic scholarship but also to the public debate about biotechnology and its regulation Thus the collection includes contributions from scholars in a range of intellectual domains indeed many of the chapters themselves draw on more than one discipline in new and challenging ways The book invites the reader to enter into this conversation in a creative way and come to appreciate more fully the many sided nature of the debate

Nature, Technology and the Sacred Bronislaw Szerszynski, 2008-04-15 This provocative and timely book argues that contemporary ideas and practices concerning nature and technology remain closely bound up with religious ways of thinking and acting Using examples from North America Europe and elsewhere it reinterprets a range of secular phenomena in terms of their conditioning by a complex series of transformations of the sacred in Western history The contemporary practices of environmental politics technological risk behaviour alternative medicine vegetarianism and ethical consumption take on new significance as sites of struggle between different sacral orderings *Nature Technology and the Sacred* introduces a radically new direction for today s critical discourse concerning nature and technology one that reinstates it as a moment within the ongoing religious history of the West

Genetics and Plant Breeding Roderick Wiley &, 2019-08-13 Plant breeding concerned with the improvement of crops through techniques involving creation of genetic

variation and subsequent selection of the desirable genotype is crucial to the continual growth of agriculture especially if the introduction of such crops with characters like high yield superior quality early maturity resistance to disease and pests etc is to be done Genetically modified plants are created by the process of genetic engineering which allows scientists to move genetic material between organisms with the aim of changing their characteristics All organisms are composed of cells that contain the DNA molecule Molecules of DNA form units of genetic information known as genes Modern techniques of genetic engineering are essentially a refinement of the kinds of genetic modifications that have long been used to enhance plants microorganisms and animals for food Advancements in molecular and cell biology have led to the development of a range of techniques for manipulating genomes collectively termed as biotechnology Today biotechnology is being used as a tool to give plants new traits that benefit agricultural production the environment and human nutrition and health This book aims at providing the basic background on all aspects related to cell genetics and plant breeding
