Gorman, 1970 *Hormones and Reproduction in Fishes, Amphibians, and Reptiles* David O. Norris, Richard E. Jones, 2012-12-06 Comparative endocrinology is one of the most rapidly developing subdisciplines within the field of endocrinology and it is having a significant impact on research at the molecular cellular organismal and environmental levels Much of the current ferment in endocrinology is in reproductive endocrinology The purpose of this volume on hormones and reproduction in fishes amphibians and reptiles is to summarize our present understandings and to identify important research problems to be addressed in the area of comparative reproductive endocrinology It was inspired by the gathering at Copper Mountain Colorado of eminent endocrine scientists from around the world on the occasion of the Tenth International Symposium on Comparative Endocrinology in July 1985 While preparing for that meeting we decided that a special volume on reproductive endocrinology was needed to summarize what is known and to stimulate research in particular directions Why do we emphasize fishes amphibians and reptiles First knowledge about the reproductive endocrinology of these ectothermic vertebrates can provide a clearer picture of the evolution of reproductive hormones and their effects on target organs This comparative approach can lead to new theories about the evolution of reproductive control mechanisms Second studies concerning the reproductive endocrinology of lower vertebrates can result in development of model systems for application to studies of birds and mammals Indeed information about the patterns of reproductive control in ectothermic vertebrates can tell us which are evolutionarily stable and which are labile **Hormones and Reproduction of Vertebrates, Volume 3** David O.
