profession 12 The science behind physical therapy has existed for years with research starting in the early 1940s This included the start of the clinical trials for the Salk vaccine to eradicate polio in the United States by the 1960s 13 According to the APTA physical therapy is a dynamic profession with an established theoretical and scientific base and widespread clinical application in the restoration maintenance and promotion of optimal physical functions 14 The term physical therapy is also synonymous with the word physiotherapy The practitioner of PT is known as a physiotherapist or a physical therapist Physical therapists undergo proper higher education licensure and continuing education courses to maintain their role in the most current and up to date techniques and services 14 In addition physical therapists assume a leadership role in patient rehabilitation prevention and health maintenance Lastly physical therapists help in the development of health care policy by ensuring that services of PT are available accessible and optimal 14 Minimal knowledge exists regarding how federal regulations apply to physical therapy research but there is the justifiable assumption that all federal regulations should apply Only a modest recognition is identified from the local IEC IRB committees that overlook human subject clinical trials in physical therapy The 2011 strategic plan of the Section of Research SOR in the APTA emphasizes the effort of increasing research education opportunities but does not overlook the responsibility of the physical therapy researcher in practicing good clinical practices for the protection of human subjects in research trials 12 Twenty first century medicine strives to evolve into an evidence based practice requiring real evidence that the determined way of treatment is the best option for the patient 15 The APTA has made recognition on its website that the PT profession should equally do the same The key topic of implementing evidence based practice in PT is emphasized in the Clinical Research Agenda The goal of the APTA is to guide every practicing PT to understand that research is important to their clinical practice Younger generation physical therapists should participate in research projects so that the future of PT practice is built upon factual evidence rather than experience 16 The main goal is that research should establish clinical practice and that treatment should be decided upon evidence Lastly research evidence should be valid Valid and qualitative evidence in research is important to physical therapy research Quality defined by the ISO 9000 addresses this as a set of standards in which an organization fulfills customer quality requirements and applicable regulatory requirements 17 Aiming to enhance customer satisfaction and achieving continual improvement are also acknowledged in the ISO Quality evidence is important in clinical trials because the core components of research help ensure that patient protection follow the compliance of ICH GCP and validates the integrity of data The customers of clinical trials are those that benefit from the development of drugs devices and methods of preventative medicine whether they are the research subjects patients with a particular illness for which the study is being investigated for physicians treating the patients or for society 18 Critical Evaluation of Research in Physical Rehabilitation Antoine Helewa,Joan M. Walker,2000 This authoritative text offers a systematic structure for evaluating research articles and incorporating the findings into professional practice Coverage includes research methodology and

design how to perform a literature search how to review and appraise papers on outcome assessment diagnostic tests economic evaluations systematic reviews meta analysis and health care review in the 21st Century **Promoting research and research careers within physiotherapy in Europe** European Region of the World Confederation for Physical Therapy,2012 The purpose of this briefing paper by the European Region of the World Confederation for Physical Therapy ER WCPT is to promote and support research and careers in research in physiotherapy in order to contribute to development of the profession in the European region and to inform Member Organisations MOs and others about relevant key issues As a briefing paper within the context of the World Confederation of Physical Therapy WCPT see Glossary it provides a description and analysis of the situation policy dimensions and implications and includes suggested recommendations for action
