New Frontiers in High Performance Computing and Big Data Geoffrey Fox, Vladimir Getov, Lucio Grandinetti, Thomas Sterling, 2017-11-15 For the last four decades parallel computing platforms have increasingly formed the basis for the development of high performance systems primarily aimed at the solution of intensive computing problems and the application of parallel computing systems has also become a major factor in furthering scientific research But such systems also offer the possibility of solving the problems encountered in the processing of large scale scientific data sets as well as in the analysis of Big Data in the fields of medicine social media marketing economics etc This book presents papers from the International Research Workshop on Advanced High Performance Computing Systems held in Cetraro Italy in July 2016 The workshop covered a wide range of topics and new developments related to the solution of intensive and large scale computing problems and the contributions included in this volume cover aspects of the evolution of parallel platforms and highlight some of the problems encountered with the development of ever more powerful computing systems The importance of future large scale data science applications is also discussed The book will be of particular interest to all those involved in the development or application of parallel computing systems

Parallel and High Performance Computing Robert Robey, Yuliana Zamora, 2021-06-22

Complex calculations like training deep learning models or running large scale simulations can take an extremely long time. Efficient parallel programming can save hours or even days of computing time. Parallel and High Performance Computing shows you how to deliver faster run times, greater scalability and increased energy efficiency to your programs by mastering parallel techniques for multicore processor and GPU hardware about the technology. Modern computing hardware comes equipped with multicore CPUs and GPUs that can process numerous instruction sets simultaneously. Parallel computing takes advantage of this now standard computer architecture to execute multiple operations at the same time, offering the potential for applications that run faster, are more energy efficient and can be scaled to tackle problems that demand large computational capabilities. But to get these benefits you must change the way you design and write software. Taking advantage of the tools, algorithms and design patterns created specifically for parallel processing is essential to creating top performing applications. About the book: Parallel and High Performance Computing is an irreplaceable guide for anyone who needs to maximize application performance and reduce execution time. Parallel computing experts Robert Robey and Yuliana Zamora take a fundamental approach to parallel programming, providing novice practitioners the skills needed to tackle any high performance computing project with modern CPU and GPU hardware. Get under the hood of parallel computing architecture and learn to evaluate hardware performance, scale up your resources to tackle larger problem sizes and deliver a level of energy efficiency that makes high performance possible on hand held devices. When you're done, you'll be able to build parallel programs that are reliable, robust and require minimal code maintenance. This book is unique in its breadth with discussions of parallel algorithms, techniques to successfully develop parallel programs and wide coverage of the most effective languages for the CPU and GPU. The programming paradigms include MPI, OpenMP, threading and vectorization for the CPU. For the GPU, the book covers OpenMP and OpenACC directive based approaches and the native based CUDA and OpenCL languages. What's inside: Steps for planning a new parallel project, Choosing the right data structures and algorithms, Addressing underperforming kernels and loops, The differences in CPU and GPU architecture about the reader. For experienced programmers with proficiency in a high performance computing language such as C, C++ or Fortran. About the authors: Robert Robey has been active in the field of parallel computing for over 30 years. He works at Los Alamos National Laboratory and has previously worked at the University of New Mexico where he started up the Albuquerque High Performance Computing Center. Yuliana Zamora has lectured on efficient programming of modern hardware at national conferences based on her work developing applications running on tens of thousands of processing cores and the latest GPU architectures.
