Representations Of Vision Trends And Tacit Assumptions In Vision Research

Ernest Lepore, Zenon Pylyshyn

Representations Of Vision Trends And Tacit Assumptions In Vision Research:

Representations of Vision Andrei Gorea,1991-04-26 This stimulating volume on vision extends well beyond the traditional areas of vision research and places the subject in a much broader philosophical context The emphasis throughout is to integrate and illuminate the visual process The first three parts of the volume provide authoritative overviews on computational vision and neural networks on the neurophysiology of visual cortex processing and on eye movement research Each of these parts illustrates how different research perspectives may jointly solve fundamental problems related to the efficiency of visual perception to the relationship between vision and eye movements and to the neurophysiological codes underlying our visual perceptions In the fourth part leading vision scientists introduce the reader to some major philosophical problems in vision research such as the nature of ultimate codes for perceptual events the duality of psychophysics the bases of visual recognition and the paradigmatic foundations of computer vision research The Oxford

Handbook of Perceptual Organization Johan Wagemans,2015-08-21 Perceptual organization comprises a wide range of processes such as perceptual grouping figure ground organization filling in completion perceptual switching etc Such processes are most notable in the context of shape perception but they also play a role in texture perception lightness perception color perception motion perception depth perception etc Perceptual organization deals with a variety of perceptual phenomena of central interest studied from many different perspectives including psychophysics experimental psychology neuropsychology neuroimaging neurophysiology and computational modeling Given its central importance in phenomenal experience perceptual organization has also figured prominently in classic Gestalt writings on the topic touching upon deep philosophical issues regarding mind brain relationships and consciousness In addition it attracts a great deal of interest from people working in applied areas like visual art design architecture music and so forth The Oxford Handbook of Perceptual Organization provides a broad and extensive review of the current literature written in an accessible form for scholars and students With chapter written by leading researchers in the field this is the state of the art reference work on this topic and will be so for many years to come **Perception as Bayesian Inference** David C. Knill,Whitman

Richards,1996-09-13 This 1996 book describes an exciting theoretical paradigm for visual perception based on experimental and computational insights **What is Cognitive Science?** Ernest Lepore,Zenon Pylyshyn,1999-10-18 Written by an

assembly of leading researchers in the field this volume provides an innovative and non technical introduction to cognitive science and the key issues that animate the field *Veröffentlichungen* Max-Planck-Gesellschaft zur Förderung der

Wissenschaften,1992 **Philosophical Foundations of Neuroscience** M. R. Bennett,P. M. S. Hacker,2022-03-14 The second edition of the seminal work in the field revised updated and extended In Philosophical Foundations of Neuroscience M R Bennett and P M S Hacker outline and address the conceptual confusions encountered in various neuroscientific and psychological theories The result of a collaboration between an esteemed philosopher and a distinguished neuroscientist this

remarkable volume presents an interdisciplinary critique of many of the neuroscientific and psychological foundations of modern cognitive neuroscience. The authors point out conceptual entanglements in a broad range of major neuroscientific and psychological theories including those of such neuroscientists as Blakemore, Crick, Damasio, Dehaene, Edelman, Gazzaniga, Kandel, Kosslyn, LeDoux, Libet, Penrose, Posner, Raichle, and Tononi, as well as psychologists such as Baar, Frith, Glynn, Gregory, William James, Weiskrantz, and biologists such as Dawkins, Humphreys, and Young. Confusions arising from the work of philosophers such as Dennett, Chalmers, Churchland, Nagel, and Searle are subjected to detailed criticism. These criticisms are complemented by constructive analyses of the major cognitive cognitive, emotional, and volitional attributes that lie at the heart of cognitive neuroscientific research. Now in its second edition, this groundbreaking work has been exhaustively revised and updated to address current issues and critiques. New discussions offer insight into functional magnetic resonance imaging (fMRI), the notions of information and representation, conflict monitoring, and the executive minimal states of consciousness. Integrated information theory and global workspace theory. The authors also reply to criticisms of the fundamental arguments posed in the first edition, defending their conclusions regarding mereological fallacy, the necessity of distinguishing between empirical and conceptual questions, the mind-body problem, and more. Essential as both a comprehensive reference work and as an up-to-date critical review of cognitive neuroscience, this landmark volume provides a scientifically and philosophically informed survey of the conceptual problems in a wide variety of neuroscientific theories. Offers a clear and accessible presentation of the subject, minimizing the use of complex philosophical and scientific jargon. Discusses how the ways the brain relates to the mind affect the intelligibility of neuroscientific research. Includes fresh insights on mind-body and mind-brain relations and on the relation between the notion of person and human being. Features more than 100 new pages and a wealth of additional diagrams, charts, and tables. Continuing to challenge and educate readers like no other book on the subject, the second edition of *Philosophical Foundations of Neuroscience* is required reading, not only for neuroscientists, psychologists, and philosophers, but also for academics, researchers, and students involved in the study of the mind and consciousness.
