Saklofske, 1999-05-31 Specialists from Canada England and the US reflect on the psychosocial and behavioral characteristics of the particular categories of exceptional children that are most often described in educational behavioral and health practices They represent medicine psychology and education and draw on theory research and practice Among their contributions are psychological perspectives on exceptionality childhood disability and the family externalizing conditions psychosocial characteristics of children with pervasive developmental disorders psychosocial correlates of physical and health disabilities the promise and problems of potential for gifted children the impact of visual impairments on psychosocial development and fostering resilience in exceptional children Annotation copyrighted by Book News Inc Portland OR

Advanced Abnormal Child Psychology Michel Hersen, Robert T. Ammerman, 2000-02 There was a time when abnormal child psychology was the stepchild of abnormal psychology with perhaps one or two chapters in an entire advanced textbook devoted to children Given the explosive amount of new research on child development in general since the 1980s stepchild is obviously no longer a valid characterization Indeed in the last 15 years many new journals devoted to childhood problems have made their appearance on library bookshelves The first edition of this book was assembled in an effort to integrate the empirical and clinical literatures and show the advanced undergraduate and beginning graduate student the breadth and depth of our existing knowledge about the disorders that manifest themselves early in development Now since its publication in 1995 a great deal more work has been done This revised and expanded second edition includes much new material from the first edition authors and from several new ones all respected experts in the field Part I offers an overview It outlines historical developments with documentation of the neglect and abuse that children suffered at the hands of society well into the 20th century developmental psychopathology as a theoretical framework to guide research and clinical efforts psychophysiological determinants of behavior with special attention focused on childhood autism and attention deficit and antisocial conduct disorders theoretical methodological and practical considerations involved in determining investigatory paths including sampling design selection measurement data analysis and pragmatics and the reactions of children families

and society to complex and diverse child health problems Part II addresses assessment and treatment issues It discusses behavioral treatment of childhood disorders and multiple case examples of commonly used techniques new developments in pharmacological treatment and sound guidelines for the consideration of pharmacotherapy and formulations and a review of preventive interventions Part III examines specific disorders of childhood and adolescence It discusses anxiety disorders affective and mood disorders mental retardation autism specific developmental disorders conduct disorder attention deficit hyperactivity disorder ADHD and eating disorders psychological aspects of pediatric disorders interventions tailored to the needs of the child and family to maximize adaptation and recovery and substance use disorders ranging from models emphasizing social influences to those focusing on biological vulnerabilities Each chapter in Part III has an identical structure clinical description causes course familial contributions psychological and genetic influences current treatments summary and includes numerous case illustrations

Women in Midlife Grace Baruch, 2012-12-06 The Study of Women In Midlife GRACE K BARUCH AND JEANNE BROOKS GUNN To describe the middle years that relatively long span when one is neither young nor old as a neglected period may no longer be accurate given current scientific and popular interest in adult development and aging But midlife is still too often seen merely as a kind of staging area on the way to old age when one gathers one's forces and tries to stock up on assets health money relationships that will be needed for the rigors of the last phase of life The middle years have been characterized more as a transition period than as a time of growth satisfaction and creativity As this volume will show although midlife is not without its difficulties it is for many women a time of unexpected pleasure even power MAJOR THEMES A central theme of this volume is the impact of social change The influence of economic conditions of ideology of the normative timing of such life events as age of marriage and childbearing are addressed in many chapters from many different perspectives Social changes are shown to have both negative and positive consequences On the negative side for example the sex differential in life expectancy is a biosocial phenomenon that greatly restricts the availability of sexual partners or more precisely heterosexual partners for older women
