    Motor Neuron Disease Research Progress Raffaele L. Mancini,2008 The motor neuron diseases or motor neuron diseases MND are a group of progressive neurological disorders that destroy motor neurons the cells that control voluntary muscle activity such as speaking walking breathing and swallowing Neurological examination presents specific signs associated with upper and lower motor neuron degeneration Signs of upper motor neuron damage include spasticity brisk reflexes and the Babinski sign Signs of lower motor neuron damage include weakness and muscle atrophy Every muscle group in the body requires both upper and lower motor neurons to function It is a common misconception that upper motor neurons control the arms while lower motor neurons control the legs The signs described above can occur in any muscle group including the arms legs torso and bulbar region Symptoms usually present between the ages of 50 70 and include progressive weakness muscle wasting and muscle fasciculations spasticity or stiffness in the arms and legs and overactive tendon reflexes Patients may present with symptoms as diverse as a dragging foot unilateral muscle wasting in the hands or slurred speech This new book presents the latest research from around the globe   <u>Research Progress in Motor Neurone Disease</u> Frank Clifford Rose,1984   <u>Cognitive Sciences Research Progress</u> Miao-Kun Sun,2009 This book presents new research on cognitive

science which is most simply defined as the scientific study either of mind or of intelligence It is an interdisciplinary study drawing from relevant fields including psychology philosophy neuroscience linguistics anthropology computer science biology and physics There are several approaches to the study of cognitive science These approaches may be classified broadly as symbolic connectionist and dynamic systems Symbolic holds that cognition can be explained using operations on symbols by means of explicit computational theories and models of mental but not brain processes analogous to the workings of a digital computer Connectionist subsymbolic holds that cognition can only be modelled and explained by using artificial neural networks on the level of physical brain properties Hybrid systems hold that cognition is best modelled using both connectionist and symbolic models and possibly other computational techniques Dynamic Systems hold that cognition can be explained by means of a continuous dynamical system in which all the elements are interrelated like the Watt Governor The essential questions of cognitive science seem to be What is intelligence and How is it possible to model it computationally
