## **Positive Feedback In Natural Systems:**

**Positive Feedback in Natural Systems** Donald L. DeAngelis, Wilfried M. Post, Curtis C. Travis, 2012-12-06 Cybernetics a science concerned with understanding how systems are regulated has reflected the preoccupations of the century in which it was born Regulation is important in twentieth century society where both machines and social organizations are complex Cybernetics focused on and became primarily associated with the homeostasis or stability of system behavior and with the negative feedbacks that stabilize systems It paid less attention to the processes opposite to negative feedback the positive feedback processes that act to change systems We attempt to redress the balance here by illustrating the enormous importance of positive feedbacks in natural systems In an article in the American Scientist in 1963 Maruyama called for increased attention to this topic noting that processes of change could occur when a deviation in anyone component of the system caused deviations in other components that acted back on the first component to reinforce or amplify the initial deviation The deviation amplification is the result of positive feedback among system components Maruyama demonstrated by numerous examples that the neglect of such processes was unjustified and suggested that a new branch of cybernetics the second cybernetics be devoted to their study

**Positive Feedback in Natural Systems** Donald Lee DeAngelis, W. M. Post, C. C. Travis, 1986 An Introduction to Global Environmental Issues Kevin T. Pickering, Lewis A. book of Nassim Taleb antifragility is a property of a system to gain from uncertainty randomness and volatility opposite to what fragility would incur An antifragile system's response to external perturbations is beyond robust such that small stressors can strengthen the future response of the system by adding a strong anticipation component Such principles are already well suited for describing behaviors in natural systems but also in approaching therapy designs and eco system modelling and eco system analysis The purpose of this book is to build a foundational knowledge base by applying antifragile system design analysis and development in natural systems including biomedicine neuroscience and ecology as main fields We are interested in formalizing principles and an apparatus that turns the basic concept of antifragility into a tool for designing and building closed loop systems that behave beyond robust in the face of uncertainty when characterizing and intervening in biomedical and ecological eco systems The book introduces the framework of applied antifragility and possible paths to build systems that gain from uncertainty We draw from the body of literature on natural systems e g cancer therapy antibiotics neuroscience and agricultural pest management in an attempt to unify the scales of antifragility in one framework The work of the Applied Antifragility Group in oncology neuroscience and ecology led by the authors provides a good overview on the current research status      Software Engineering for Self-Adaptive Systems Betty H.
