*Reimagining Urban Marxisms* Francesco Biagi, 2025-06-24 This volume presents an interdisciplinary and international revaluation of urban Marxisms Bringing together the main critical Marxist perspectives from around the world on contemporary urban studies it engages with a range of issues connected to the urban question such as urban sprawl housing and increasing rates of urbanization across the globe With attention to the manner in which the three axes of class gender and race play a fundamental role in contemporary social phenomena it interweaves different issues that are inextricably linked in matters of urban inequality The book bridges a significant gap between urban studies and Marxists theories by reviving Marx and Engels ideas in the context of analyzing urban studies in the twenty first century The objective is to bring together diverse perspectives and directions of the ongoing debate on the urban question Although there are multiple Marxisms and theoretical currents inspired by Marxism that seek to understand the urban and spatial transformations of today there has been a lack of comprehensive scholarship that systematically brings them together to frame this debate The goal is to unite the main critical Marxist perspectives on contemporary urban studies Reimagining Urban Marxisms will therefore appeal to scholars across disciplines with interests in Marxist analyses of contemporary urban and spatial transformations and the phenomenon of planetary urbanization

*Self-Organization and the City* Juval Portugali, 2012-12-06 Cities first came into existence more than five thousand years ago How to deal with these partly fascinating partly frightening creatures of mankind both practically and intellectually concerns all of us and in particular presents areal challenge to city planners Each historical epoch has had its own particular attitudes associated with the Zeitgeist Accordingly the planning and steering of cities were based on quite different criteria But in spite of these differences the concept of planning and steering was and still is the cornerstone of our dealing with cities Nevertheless the planner s dilemma is becoming more and more visible cities and megacities seem to be un plannable In this book Juval

Portugali introduces a new idea Cities are self organizing systems To substantiate his revolutionary concept he uses several interlinked methods On the one hand and to my own delight he employs in his arguments theoretical tools developed in the interdisciplinary field of synergetics On the other hand jointly with his co workers he has performed detailed model calculations on cellular nets It has been a great pleasure and a wonderful experience for me to discuss these concepts with Juval Portugali over a number of years I was repeatedly and deeply impressed by the way he established profound and often surprising links to other fields of science
