Postmodern Philosophy and the Scientific Turn Dorothea E. Olkowski, 2012-04-23 A groundbreaking interdisciplinary approach to the study of consciousness Beautifully written engaging throughout and captivating Claire Colebrook The Pennsylvania State University What can come of a scientific engagement with postmodern philosophy Some scientists have claimed that the social sciences and humanities have nothing to contribute except perhaps peripherally to their research Dorothea E Olkowski shows that mathematics itself the historic link between science and philosophy plays a fundamental role in the development of the worldviews that drive both fields Focusing on language its usage and expression of worldview she develops a phenomenological account of human thought and action to explicate the role of philosophy in the sciences Olkowski proposes a model of phenomenology both scientific and philosophical that helps make sense of reality and composes an ethics for dealing with unpredictability in our world

Hypnosis Between Science and Magic Isabelle Stengers, 2024-11-14 What if judgment returned to the craft of magic How would that relieve the burdens of critique and realign its priorities These questions regarding the value of magic to thinking are at the very heart of the acclaimed philosopher of science Isabelle Stengers political and philosophical thought and her insistence that the smoke of the burned witches still hangs in our nostrils Now in the first English translation of this classic text *Hypnosis Between Science and Magic* provides an entry point to the work of Isabelle Stengers who has so originally and forcefully shifted how we think about the history of ideas The book focuses in on an area of her thought that has recurred throughout her career the presumed antagonism between magic and science and especially the evacuation of magic from all that is thought to be scientifically valid

The Social and the Symbolic Bernard Bel, 2007-03-06 This is the second book in the three volume series *Communication Processes* The essays in the volume highlight the links between culture studies and the use of communication in binding together a community also providing a voice to the unheard and unsung

Darwin's Psychology Ben Bradley, 2020-10-08 Darwin has long been hailed as forefather to behavioural science especially nowadays with the growing popularity of evolutionary psychologies Yet until now his contribution to the field of psychology has been somewhat understated This is the first book ever to examine the riches of what Darwin himself wrote about psychological matters It

unearths a Darwin new to contemporary science whose first concern is the agency of organisms from which he derives both his psychology and his theory of evolution A deep reading of Darwin s writings on climbing plants and babies blushing and bower birds worms and facial movements shows that for Darwin evolution does not explain everything about human action Group life and culture are also keys whether we discuss the dynamics of conscience or the dramas of desire Thus his treatment of facial actions sets out from the anatomy and physiology of human facial movements and shows how these gain meanings through their recognition by others A discussion of blushing extends his theory to the way reading others expressions rebounds on ourselves I care about how I think you read me This dynamic proves central to how Darwin understands sexual desire the production of conscience and of social standards through group dynamics and the role of culture in human agency Presenting a new Darwin to science and showing how widely Darwin s understanding of evolution and agency has been misunderstood and misrepresented in biology and the social sciences this important new book lights a new way forward for those who want to build psychology on the foundation of evolutionary biology From Energy to Information Bruce Clarke,Linda Dalrymple Henderson,2002 This book offers an innovative examination of the interactions of science and technology art and literature in the nineteenth and twentieth centuries Scholars in the history of art literature architecture computer science and media studies focus on five historical themes in the transition from energy to information thermodynamics electromagnetism inscription information theory and virtuality Different disciplines are grouped around specific moments in the history of science and technology in order to sample the modes of representation invented or adapted by each field in response to newly developed scientific concepts and models By placing literary fictions and the plastic arts in relation to the transition from the era of energy to the information age this collection of essays discovers unexpected resonances among concepts and materials not previously brought into juxtaposition In particular it demonstrates the crucial centrality of the theme of energy in modernist discourse Overall the volume develops the scientific and technological side of the shift from modernism to postmodernism in terms of the conceptual crossover from energy to information The contributors are Christoph Asendorf Ian F A Bell Robert Brain Bruce Clarke Charlotte Douglas N Katherine Hayes Linda Dalrymple Henderson Bruce J Hunt Douglas Kahn Timothy Lenoir W J T Mitchell Marcos Novak Edward Shanken Richard Shiff David Tomas Sha Xin Wei and Norton Wise **Essays in Honor of Lois Parkinson Zamora** John Ochoa,Monika Kaup,2022-10-03 Honoring the lifework of the comparative literature scholar From the Americas to the World Essays in Honor of Lois Parkinson Zamora traces artistic and cultural pathways that connect Latin American literature and culture to the Americas and to the world beyond The essays in this collection cover three critical fields comparative hemispheric American literature magical realism and the Baroque New World Baroque Neobaroque Beginning with a critical reassessment of hemispheric American studies these essays analyze the works of a wide array of writers such as Roberto Bola o Alejo Carpentier Gabriel Garc a M rquez Waldo Frank and Jos Lez These chapters build upon the legacy of the

scholarship done by Dr Zamora and exemplify the pattern of literary studies that she has driven forward **Rekursionen** Ana Ofak, Philipp von Hilgers, 2010 Nicht nur in der Mathematik wird seit den 1950ern der Dekade der ersten Computer mit Rekursionen gerechnet Auch die epistemologisch orientierten Disziplinen sind dazu bergangen die Formation neuen Wissens durch Rückgriffe auf vergangene Konstellationen aufzuarbeiten Denn gerade die Elemente des Wissens die liegengelassen wurden und keine Modifikation mehr erfahren haben erweisen sich mitunter als höchst anschlussfähig Vor diesem Hintergrund messen die versammelten Beiträge Rekursionen eine doppelte Bedeutung in der Geschichte des Wissens zu Einmal als modus operandi der der Hervorbringung von Wissen inhärent ist Und zweitens als wissenschaftliche Methode die vor epochen und disziplinen bergreifenden Darstellungen nicht zurückschrecken muss *The Power of Invention*, 1997
