## **Remote Sensing Models And Methods For Image Processing:**

Remote Sensing Robert A. Schowengerdt, 1997 Remote sensing is the use of electromagnetic sensors to monitor the earth's surface and atmosphere. This technique can produce anything from topographic or geologic maps to two or three dimensional distributions of environmental parameters to the detection of developing hurricanes or floods. These sensors produce digitized data so it is important that anyone working in remote sensing is familiar with the techniques used. This updated second edition discusses a unified framework and rationale for designing and evaluating image processing algorithms.

Remote Sensing Robert A. Schowengerdt, 1997 This book is a completely updated greatly expanded version of the previously successful volume by the author. The Second Edition includes new results and data and discusses a unified framework and rationale for designing and evaluating image processing algorithms. Written from the viewpoint that image processing supports remote sensing science, this book describes physical models for remote sensing phenomenology and sensors and how they contribute to models for remote sensing data. The text then presents image processing techniques and interprets them in terms of these models. Spectral, spatial, and geometric models are used to introduce advanced image processing techniques such as hyperspectral image analysis, fusion of multisensor images, and digital elevation model extraction from stereo imagery. The material is suited for graduate level engineering, physical, and natural science courses or practicing remote sensing scientists. Each chapter is enhanced by student exercises designed to stimulate an understanding of the material. Over 300 figures are produced specifically for this book, and numerous tables provide a rich bibliography of the research literature.

**Remote Sensing** Robert A. Schowengerdt, 2006-08-28 Remote sensing is a technology that engages electromagnetic sensors to measure and monitor changes in the earth's surface and atmosphere. Normally this is accomplished through the use of a satellite or aircraft. Remote Sensing in its third edition seamlessly connects the art and science of earth remote sensing with the latest interpretative tools and techniques of computer aided image processing. Newly expanded and updated, this edition delivers more of the applied scientific theory and practical results that helped the previous editions earn wide acclaim and become classroom and industry standards. Dr. Schowengerdt presents an advanced unified framework and rationale that uniquely empowers the reader with the latest critical thinking skills and prerequisite knowledge needed to successfully design, develop, and incorporate maintainable remote sensing solutions for real world application. Advanced remote sensing image processing techniques such as hyperspectral image analysis, fusion of multisensor images, and digital elevation model extraction from stereo imagery are discussed theoretically in terms of spectral, spatial, and geometric models. An expanded exercise section is also included at the end of each chapter, allowing for the greatest level of mastery ever. Features a new lively discussion of the NASA EOS satellites Terra and Aqua and the commercial satellites IKONOS and Quickbird. New larger format provides additional access to 32 PAGE FULL COLOR plate insert and improved readability. Additional data processing algorithms help connect and enhance the collective understanding.
