Positivity In Algebraic Geometry II Posi:

Positivity in Algebraic Geometry II R.K. Lazarsfeld, 2017-07-25 This two volume work on Positivity in Algebraic Geometry contains a contemporary account of a body of work in complex algebraic geometry loosely centered around the theme of positivity Topics in Volume I include ample line bundles and linear series on a projective variety the classical theorems of Lefschetz and Bertini and their modern outgrowths vanishing theorems and local positivity Volume II begins with a survey of positivity for vector bundles and moves on to a systematic development of the theory of multiplier ideals and their applications A good deal of this material has not previously appeared in book form and substantial parts are worked out here in detail for the first time At least a third of the book is devoted to concrete examples applications and pointers to further developments Whereas Volume I is more elementary the present Volume II is more at the research level and somewhat more specialized Both volumes are also available as hardcover editions as Vols 48 and 49 in the series *Ergebnisse der Mathematik und ihrer Grenzgebiete* *Positivity in algebraic geometry* Robert Lazarsfeld, 2011-04-13 [Selected Works of Phillip A. Griffiths with Commentary](#) Phillip Griffiths, Maurizio Cornalba, 2003 Over the last four decades Phillip Griffiths has been a central figure in mathematics During this time he made crucial contributions in several fields including complex analysis algebraic geometry and differential systems His books and papers are distinguished by a remarkably lucid style that invites the reader to understand not only the subject at hand but also the connections among seemingly unrelated areas of mathematics Even today many of Griffiths papers are used as a standard source on a subject Another important feature of Griffiths writings is that they often bring together classical and modern mathematics The four parts of *Selected Works* Analytic Geometry Algebraic Geometry Variations of Hodge Structures and Differential Systems are organized according to the subject matter and are supplemented by Griffiths brief but extremely illuminating personal reflections on the mathematical content and the times in which they were produced Griffiths *Selected Works* provide the reader with a panoramic view of important and exciting mathematics during the second half of the 20th century **Certificates of Positivity for Real Polynomials** Victoria Powers, 2021-11-26 This book collects and explains the many theorems concerning the existence of certificates of positivity for polynomials that are positive globally or on semialgebraic sets A certificate of positivity for a real polynomial is an algebraic identity that gives an immediate proof of a positivity condition for the polynomial Certificates of positivity have their roots in fundamental work of David Hilbert from the late 19th century on positive polynomials and sums of squares Because of the numerous applications of certificates of positivity in mathematics applied mathematics engineering and other fields it is desirable to have methods for finding describing and characterizing them For many of the topics covered in this book appropriate algorithms computational methods and applications are discussed This volume contains a comprehensive accessible up to date treatment of certificates of positivity written by an expert in the field It provides an overview of both the theory and computational aspects of the subject and includes many of

the recent and exciting developments in the area Background information is given so that beginning graduate students and researchers who are not specialists can learn about this fascinating subject Furthermore researchers who work on certificates of positivity or use them in applications will find this a useful reference for their work

An Elementary Treatise on Conic Sections and Algebraic Geometry ... George Hale Puckle, 1887 *Global Analysis* Donald Clayton Spencer, Shokichi Iyanaga, 2015-03-08 Global analysis describes diverse yet interrelated research areas in analysis and algebraic geometry particularly those in which Kunihiko Kodaira made his most outstanding contributions to mathematics The eminent contributors to this volume from Japan the United States and Europe have prepared original research papers that illustrate the progress and direction of current research in complex variables and algebraic and differential geometry The authors investigate among other topics complex manifolds vector bundles curved 4 dimensional space and holomorphic mappings Bibliographies facilitate further reading in the development of the various studies Originally published in 1970 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905
