Roche Problem And Its Significance For Double Star Astronomy:

The Roche Problem Zdenek Kopal, 2012-12-06 The words of this preface were written when the book was ready to go to the press and are limited to only a few points which are best made in this place As is intimated by the sub title the whole volume was written with applications in mind to double star astronomy The latter is however not the only branch of our science which could benefit from its contents The same is true of certain aspects of the dynamics of stellar systems or galaxies the stellar populations of which are also characterized by the fact that the mean free path of their constituent stars are long in comparison with the dimensions of the respective systems the central condensations of which are high enough to approximate the gravitational action of a mass point This fact did not to be sure escape the attention of previous investigators in the case of globular clusters in particular the Roche model was introduced in their studies under the guise of polytropic models characterized by the index $n = 5$ though no particular attention will be paid to these in this book But possible applications of the Roche model are not limited to problems arising in stellar astrophysics With Coulomb forces replacing gravitation the equilibrium model finds a close analogy in the field of electrostatics as was pointed out already at the beginning of this century by then young J H Jeans cf **Zdenek Kopal's Binary Star Legacy** Horst Drechsel, Miloslav Zejda, 2005-08-01 An international conference entitled Zdenek Kopal's Binary Star Legacy was held on the occasion of the late Professor Kopal's 90th birthday in his home town of Litomyšl Czech Republic and dedicated to the memory of one of the leading astronomers of the 20th century Professor Kopal who devoted 60 years of his scientific life to the exploration of close binary systems initiated a breakthrough in this field with his description of binary components as non spherical stars deformed by gravity with surfaces following Roche equipotentials Such knowledge triggered the development of new branches of astrophysics dealing with the structure and evolution of close binaries and the interaction effects displayed by exciting objects such as cataclysmic variables symbiotic stars or X ray binaries Contributions to this conference included praise of the achievements of a great astronomer and personal reminiscences brought forward by Kopal's former students and colleagues and reflected the state of the art of the dynamically evolving field of binary research which owes so much to the pioneering work of Zdenek Kopal Literature 1989, Part 1 Astronomisches Rechen-Institut, 2013-11-11 From the reviews Astronomy and Astrophysics Abstracts has appeared in semi annual volumes since 1969 and it has already become one of the fundamental publications in the fields of astronomy astrophysics and neighbouring sciences It is the most important English language abstracting journal in the mentioned branches The abstracts are classified under more than a hundred subject categories thus permitting a quick survey of the whole extended material The AAA is a valuable and important publication for all students and scientists working in the fields of astronomy and related sciences As such it represents a necessary ingredient of any astronomical library all over the world Space Science Review Dividing the whole field plus related subjects into 108 categories each work is numbered and most are accompanied by brief abstracts Fairly

comprehensive cross referencing links relevant papers to more than one category and exhaustive author and subject indices are to be found at the back making the catalogues easy to use The series appears to be so complete in its coverage and always less than a year out of date that I shall certainly have to make a little more space on those shelves for future volumes

The Observatory Magazine Meyers Handbuch Weltall Joachim Krautter,1994 Mathematical Theory of Stellar Eclipses Zdenek Kopal,2012-12-06 ASTRONOMICAL ECLIPSE PHENOMENA In looking over the long history of human science from time immemorial to our own times it is impossible to overestimate the role played in it by the phenomena of eclipses of the celestial bodies both within our solar system as well as in the stellar universe at large Not later than in the 4th century B C the observed features of the shadow cast on the Moon by the Earth during eclipses led Aristotle 384 322 B C to formulate the first scientific proof worthy of that name of the spherical shape of the Earth and only somewhat later the eclipses of the Sun provided Aristarchos in the early part of the 3rd century B C or Hipparchos 2nd half of the same century with the geometric means to ascertain the distance which separates the Earth from the Sun In the 17th century A D in 1676 to be exact the timings of the eclipses of the satellites of Jupiter by their central planet enabled Olaf Romer to discover that the velocity with which light propagates through space is finite *Romanian Astronomical Journal* ,1992 **Space Geodesy and Space Geodynamics** Milan Burša,Jan Kostelecký,1999 **Advances in Astronomy and Astrophysics** Zdeněk Kopal,2013-10-22 Advances in Astronomy and Astrophysics Volume 9 covers reviews on the advances in astronomy and astrophysics The book presents reviews on the Roche model and its applications to close binary systems The text then describes the part played by lunar eclipses in the evolution of astronomy the classical theory of lunar eclipses deviations from geometrical theory and the methods of photometric observations of eclipses The problems of other phenomena related in one way or another to lunar eclipses are also considered The book further tackles the infrared observation on the eclipsed moon as well as some of the experimental measurements at infrared wavelengths which have proved useful in evaluating various theoretical models and more generally in specifying the radiation environment on the lunar surface Astronomers astrophysicists and students taking related courses will find the book invaluable **Eclipsing Binary Stars** Josef Kallrath,Eugene F. Milone,2013-11-11 Have you ever stopped at a construction project on the way to your office and the day s astrophysics Remember the other onlookers folks just enjoying the spectacle as we all do in following developments away from our areas of active work We are excited and thrilled when the Hubble Space Telescope discovers an Einstein Cross when the marvelous pulsars enter our lives and when computer scientists put a little box on our desk that out performs yesterday s giant machines We are free to make use of such achievements and we respect the imagination and discipline needed to bring them about just as onlookers respect the abilities and planning needed to create a building they may later use After all each of us contributes in our own areas as best we can In addition to the serious onlookers there will be passers by who take only a casual look at the site They may use the building later but have little or no interest in its construction and give no thought to the resources needed to

bring it to completion Upon arriving at work those persons write astronomy and astrophysics books at various levels in which they must say something about dose binary stars Usually a page or two will do and the emphasis is on the MLR mass luminosity radius data obtained only from binaries
