## **Viral Challenge Compare:**

Steps Forwards in Diagnosing and Controlling Influenza Manal Mohammad Baddour, 2016-10-26 The World Health Organization WHO estimates that 3.5 million cases of severe influenza worldwide will result in 250 000-500 000 deaths annually. Collectively, data are shared via the WHO's Global Influenza Surveillance and Response System (GISRS) which includes 143 institutions in 113 WHO member states to help alert the emergence of antigenic variants or the beginning of a pandemic. In April 2009, the Centers for Disease Control and Prevention (CDC) cited the first incidence of human-to-human transmission of pandemic H1N1, also referred to as swine influenza A, which was antigenically distinct from other circulating human H1N1. As the first influenza pandemic of the twenty-first century, pandemic H1N1 was not included in the annual trivalent vaccine regimen, leaving a large majority of the population unprotected from the newly emerging pathogen.

**Innovative Therapeutic and Vaccine Approaches against Respiratory Pathogens** Christophe Chevalier, Cynthia Calzas, Delphine Descamps, Michel Chignard, 2020-05-06      **Pandemic Influenza Vaccine Approaches: Current Status and Future Directions** Rebecca Jane Cox, Michael Schotsaert, Corey Patrick Mallett, 2022-09-28      **Vaccines against RNA Viruses** Juan Carlos Saiz, 2020-12-28 RNA viruses cause animal, human, and zoonotic diseases that affect millions of individuals, as is being exemplified by the devastating ongoing epidemic of the recently identified SARS-CoV-2. For years, vaccines have had an enormous impact on overcoming the global burden of diseases. Nowadays, a vast number of different approaches from purified inactivated and live attenuated viruses, nucleic acid (DNA or RNA)-based candidates, virus-like particles, subunit elements, and recombinant viruses have been employed to combat viruses. However, for many of them, efficient vaccines are not yet available. This will probably change dramatically with the current COVID-19 pandemic, as a vast variety of vaccinology approaches are being tested against it, with hundreds of candidates under development; dozens of them already in clinical trials, a fact that is breaking records in vaccine development and implementation. This is becoming possible thanks to the enormous work carried out during years to have the bases for a quick response even against unknown pathogens in an impressive short time. Here, results obtained with different vaccine's methodological approaches against human HIV, HCV, HRV, animal PRRSV, PEDV, FMDV, VHSV, and zoonotic RVFV, WNV, RNA viruses are presented by field experts.      *Women in Cytokines and Soluble Mediators in Immunity* Diana Boraschi, Giselle Penton-Rol, Marita Troye Blomberg, Olukemi Amodu, 2024-02-13 We are delighted to present the inaugural *Frontiers in Immunology Women in Cytokines and Soluble Mediators in Immunity* series of article collections. At present, less than 30% of researchers worldwide are women. Long-standing biases and gender stereotypes are discouraging girls and women away from science-related fields, and Science, Technology, Engineering, and Mathematics (STEM) research, in particular. Science and gender equality are, however, essential to ensure sustainable development, as highlighted by UNESCO. In order to change traditional mindsets, gender equality must be promoted, stereotypes defeated, and girls and women should be encouraged to pursue STEM careers.      *Recent Advances in*
