But that order results primarily from the predictable irrationality of investors as well as from people's uncoordinated attempts to profit. The market patterns that result do not rely on rationality or efficiency. A framework is developed for understanding financial markets using a combination of psychology, statistics, game and gambling analysis, market history, and the author's experience. It expresses analytically how professional investors and traders think about markets as games in which other participants employ inferior, partially predictable strategies. Those strategies, interactions, can be toxic and lead to booms, bubbles, busts, and crashes, or can be less dramatic, leading to various patterns that are mistakenly called market inefficiencies and stylized facts. A logical case is constructed starting from two foundations: the psychology of human decision making and the Fundamental Laws of Gambling. Applying the Fundamental Laws to trading leads to the idea of gambling rationality, replacing the efficient market's
