Hands-On ROS for Robotics Programming Bernardo Ronquillo Japón, 2020-02-26 Take your ROS skills to the next level by implementing complex robot structures in a ROS simulation Key Features Learn fundamental ROS concepts and apply them to solve navigation tasks Work with single board computers to program smart behavior in mobile robots Understand how specific characteristics of the physical environment influence your robot's performance Book Description Connecting a physical robot to a robot simulation using the Robot Operating System ROS infrastructure is one of the most common challenges faced by ROS engineers With this book you'll learn how to simulate a robot in a virtual environment and achieve desired behavior in equivalent real world scenarios This book starts with an introduction to GoPiGo3 and the sensors and actuators with which it is equipped You'll then work with GoPiGo3's digital twin by creating a 3D model from scratch and running a simulation in ROS using Gazebo Next the book will show you how to use GoPiGo3 to build and run an autonomous mobile robot that is aware of its surroundings Finally you'll find out how a robot can learn tasks that have not been programmed in the code but are acquired by observing its environment You'll even cover topics such as deep learning and reinforcement learning By the end of this robot programming book you'll be well versed with the basics of building specific purpose applications in robotics and developing highly intelligent autonomous robots from scratch What you will learn Get to grips with developing environment aware robots Gain insights into how your robots will react in physical environments Break down a desired behavior into a chain of robot actions Relate data from sensors with context to produce adaptive responses Apply reinforcement learning to allow your robot to learn by trial and error Implement deep learning to enable your robot to recognize its surroundings Who this book is for If you are an engineer looking to build AI powered robots using the ROS framework this book is for you Robotics enthusiasts and hobbyists who want to develop their own ROS robotics projects will also find this book useful Knowledge of Python and/or C programming and familiarity with single board computers such as Raspberry Pi is necessary to get the most out of this book

BiLBIQ: A Biologically Inspired Robot with Walking and Rolling Locomotion Ralf Simon King, 2012-11-06 The book BiLBIQ A biologically inspired Robot with walking and rolling locomotion deals with implementing a locomotion behavior observed in the biological archetype *Cebrennus villosus* to a robot prototype whose structural design needs to be developed The biological sample is investigated as far as possible and compared to other evolutionary solutions within the framework of nature's inventions Current achievements in robotics are examined and evaluated for their relation and relevance to the robot prototype in question An overview of what is state of the art in actuation ensures the choice of the hardware available and most suitable for this project Through a constant consideration of the achievement of two fundamentally different ways of locomotion with one and the same structure a robot design is developed and constructed taking hardware constraints into account The development of a special leg structure that needs to resemble and replace body elements of the biological archetype is a special challenge to be dealt with Finally a

robot prototype was achieved which is able to walk and roll inspired by the spider *Cebrennus villosus* **Programming Robots with ROS** Morgan Quigley, Brian Gerkey, William D.
