This book requires that both parents and children work together at least 15 minutes a day on reading texts and assembling some robot pieces only the printed version Do you like movies Do you like robots This book is a reading book for children from 5 to 80 years old OK OK from 5 to your age The idea is that every parent and his her child spend some few minutes every day practicing reading explaining the concepts for reading comprehension and learning about robotics Every book has vocabulary for parents to help children to understand some terms from the world of Robots Additionally with very simple

tools like glue and scissors parents and children build the robot's parts but again it's recommended to make just one robot part per day. This activity helps to build children's imagination and creativity. It is a wonderful way to develop fine motor skills and something very important nowadays: patience. Some cutting and folding is a good exercise to help children to figure out geometric figures. Every reading session becomes a fun activity while kids see their own progress in several ways. The more they read, the closer they get to have their paper craft robot as a final reward. Automated printing has limitations and though the desire is to have the paper craft robot on a sheet with good thickness, we had to use the same paper thickness of the interior pages.

**Young Children's Developing Understanding of the Biological World** Peter J. Marshall, Kimberly Brenneman, 2019-07-23. This book explores current research on young children's beliefs and knowledge about the biological world, otherwise known as folkbiology. Contributors discuss factors that shape the development of folkbiological knowledge as well as possible interventions designed to counteract cognitive biases that can interfere with the development of scientifically informed reasoning about natural phenomena. Taken together, the papers provide insights into the contributions of cognitive biases to the development of biological misunderstandings and into the life experiences and contexts that can contribute to or impede accurate learning of biological concepts. As part of a wider literature, the insights provided by the authors are relevant to the design of educational experiences that will foster children's exploration and further their understanding of life science ideas. The chapters in this book were originally published as a special issue of *Early Education and Development*.
