Phase Transformations And Material Instabilities In Solids:

Phase Transformations and Material Instabilities in Solids Morton Gurtin, 2012-12-02 Phase Transformations and Material Instabilities in Solids contains the proceedings of an interdisciplinary conference on phase transitions and material instabilities in solids conducted by the Mathematics Research Center of the University of Wisconsin Madison on October 11 13 1983 in Madison Wisconsin The papers explore phase transformations and material instabilities in solids and cover topics ranging from equilibrium shapes of surfaces to morphological instabilities and dendrite formation Shock induced phase transitions are also considered Comprised of 11 chapters this book begins with a discussion on material instabilities and the calculus of variations followed by an analysis of mechanical analogs of coexistent phases A model for the formation of shear bands in simple shear that involves the description of irreversible mechanical shear and the resulting heat release is then presented Subsequent chapters focus on the Cauchy and Born hypotheses for crystals the arrangement of coherent phases in a loaded body one dimensional shock layers in Korteweg fluids and dynamics of first order phase transitions The final chapter deals with equilibrium shapes of surfaces and grain boundaries This monograph will be of interest to students practitioners and researchers in mathematics and statistical physics

Phase Transformations and Material Instabilities in Solids Morton E. Gurtin, 1984 Continuum Models for Phase Transitions and Twinning in Crystals Mario Pitteri, G. Zanzotto, 2002-06-27 Continuum Models for Phase Transitions and Twinning in Crystals presents the fundamentals of a remarkably successful approach to crystal thermomechanics Developed over the last two decades it is based on the mathematical theory of nonlinear thermoelasticity in which a new viewpoint on material symmetry motivated by molecular theories plays a c

Material Instabilities in Elastic and Plastic Solids Henryk Petryk, 2014-05-04 This book collects recent theoretical developments in the area of material instability in elastic and plastic solids along with related analytical and numerical methods and applications The existing different approaches to instability phenomena in metal single crystals polycrystals and in geomaterials are presented with the emphasis laid on mutual relations and on unifying concepts including ellipticity loss and the energy criterion Quasi static bifurcation initiation of single or multiple shear bands and post critical strain localization are examined along with dynamic phenomena as wave propagation moving shocks internal snap through and instability of flutter type This gives an overview of a variety of material instability problems methods and applications

Introduction to Solid State Chemistry James E. House, 2024-02-21 Introduction to Solid State Chemistry provides a strong background to the structures of solids and factors that determine this structure The content presented will also stress transformations of solids both in physical forms and chemical composition In so doing topics such as phase transitions sintering reactions of coordination compounds

photovoltaic compounds are described whilst kinetics and mechanisms of solid state reactions are covered in depth There are currently few books that deal with solid state chemistry where a considerable number instead deal with solid state physics and materials science engineering This book provides someone needing or wishing to learn about the chemistry of solids a comprehensive resource that describes structures of solids the behaviour of solids under applied stresses the types of reactions that solids undergo and the phenomenological aspects of reactions in solids Kinetics of reactions in solids is very seldom covered in current literature and an understanding of the mechanisms of reactions in solids is necessary for many applications James E House provides a balanced treatment of structure dynamics and behaviour of solids at a level commensurate with upper level undergraduates or beginning graduate students who wish to obtain an introduction and overview to solid state chemistry Provides a fundamental introduction and entry point to solid state chemistry acting as a useful prerequisite for further learning in the area Presents a balanced approach that not only emphasizes structures of solids but also provides information on reactions of solids and how they occur Gives much needed focus to the kinetics of reactions of solids and their mechanisms where existing literature covers little of this Explores crucial solid state chemistry topics such as solar energy conversion reactions of solid coordination compounds diffusion sintering and other transformations of solids Features accessible and well written examples and case studies featuring many new and bespoke supporting illustrations offering an excellent framework that will help students to understand reaction mechanisms

Continuum Thermomechanics Gérard A. Maugin, Raymonde Drouot, François Sidoroff, 2006-04-11 Contributed by world renowned specialists on the occasion of Paul Germain's 80th birthday this unique book reflects the foundational works and the intellectual influence of this author It presents the realm of modern thermomechanics with its extraordinary wealth of applications to the behaviour of materials whether solid or fluid The thirty one contributions follow an easygoing autobiographical sketch by Paul Germain and highlight the power and richness of a methodological approach to the phenomenology of many materials This approach combines harmoniously thermodynamics and continuum theory in order to provide exploitable thermodynamically admissible models of a large variety of behaviours and phenomena including those of diffusion thermoelasticity viscoplasticity relaxation hysteresis wetting shape memory effects growth phase transitions stability fracture shocks machining of materials microstructured solids complex fluids etc Especially aimed at graduate students researchers and engineers in mechanical engineering and materials science this book also presents the state of the art in an active field of research and opens new horizons in other scientific fields such as applied mathematics and applied physics because of the intellectual satisfaction and remarkable efficiency provided by the advocated approach

Fundamental Contributions to the Continuum Theory of Evolving Phase Interfaces in Solids John M. Ball, David Kinderlehrer, Paulo Podio-Guidugli, Marshall Slemrod, 2012-12-06 A traditional way to honor distinguished scientists is to combine collections of papers solicited from friendly colleagues into dedicatory volumes To honor our friend and colleague

Mort Gurtin on the occasion of his sixty fifth birthday we followed a surer path to produce a work of intrinsic and lasting scientific value We collected papers that we deemed seminal in the field of evolving phase interfaces in solids a field to which Mort Gurtin himself has made fundamental contributions Our failure for lack of space to include in this volume every paper of major significance is mitigated by the masterly introduction prepared by Eliot Fried which assesses the contributions of numerous works We hope that this collection will prove useful and stimulating to both researchers and students in this exciting field August 1998 John M Ball David Kinderlehrer Paulo Podio Guidugli Marshall Slemrod Contents Introduction Fifty Years of Research on Evolving Phase Interfaces By Eliot Fried 0 0 1 I Papers on Materials Science Surface Tension as a Motivation for Sintering By C Herring 33 Two Dimensional Motion of Idealized Grain Boundaries By W W Mullins 0 0 70 Morphological Stability of a Particle Growing by Diffusion or Heat Flow By w w Mullins and R F Sekerka 75 Energy Relations and the Energy Momentum Tensor in Continuum Mechanics By J D Eshelby 82 The Interactions of Composition and Stress in Crystalline Solids By F e Larche and 1 W Cahn 120 II Metastability and Incompletely Posed Problems Stuart S. Antman, J.L. Ericksen, David Kinderlehrer, Ingo Müller, 2012-12-06 This IMA Volume in Mathematics and its Applications Metastability and Incompletely Posed Problems represents the proceedings of a workshop which was an integral part of the 19R4 R5 IMA program on CONTINUUM PHYSICS AND PARTIAL DIFFERENTIAL EQUATIONS We are grateful to the Scientific Committee I L Ericksen D Kinderlehrer H Ryzhik C Dafermos for their dedication and hard work in developing an imaginative stimulating and productive year long program George R Sell Hans Weinberger Preface Most equilibrium events in nature do not realize configurations of minimum energy They are only metastable Available knowledge of constitutive relations and environmental interactions may be limited As a result many configurations may be compatible with the data Such questions are incompletely posed The papers in this volume address a wide variety of these issues as they are perceived by the material scientist and the mathematician They represent a portion of the significant activity which has been underway in recent years from the experimental arena and physical theory to the analysis of differential equations and computation Mechanics and Mathematics of Crystals Jerald L. Ericksen, Millard F. Beatty, Michael A. Hayes, 2005 This book is a unique and comprehensive collection of pioneering contributions to the mechanics of crystals by J L Ericksen a prominent and leading contributor to the study of the mechanics and mathematics of crystalline solids over the past 35 years It presents a splendid corpus of research papers that cover areas on crystal symmetry constitutive equations defects and phase transitions all topics of current importance to a broad group of workers in the field The volume thus provides in one place material that is frequently referenced by numerous researchers on crystals across a spectrum of activities in areas of continuum mechanics applied mathematics engineering and materials science Each group of papers or chapters in the book is preceded by a summary introduction that describes how the papers on that topic fit together and in which Ericksen sketches the context of each paper and shares with the reader his thinking and insightfulness in writing it The volume edited
