**From Chemical Philosophy to Theoretical Chemistry** Mary Jo Nye, 1994-03-01 How did chemistry and physics acquire their separate identities and are they on their way to losing them again Mary Jo Nye has written a graceful account of the historical demarcation of chemistry from physics and subsequent reconvergences of the two from Lavoisier and Dalton in the late eighteenth century to Robinson Ingold and Pauling in the mid twentieth century Using the notion of a disciplinary identity analogous to ethnic or national identity Nye develops a theory of the nature of disciplinary structure and change She discusses the distinctive character of chemical language and theories and the role of national styles and traditions in building a scientific discipline Anyone interested in the history of scientific thought will enjoy pondering with her the question of whether chemists of the mid twentieth century suspected chemical explanation had been reduced to physical laws just as Newtonian mechanical philosophers had envisioned in the eighteenth century Thomas Reid on Mathematics and Natural Philosophy Thomas Reid, 2017-07-28 Reconstructs Reid's career as a mathematician and natural philosopher for the first time

**The Language of Mineralogy** Matthew D. Eddy, 2016-12-05 Classification is an important part of science yet the specific methods used to construct Enlightenment systems of natural history have proven to be the *tabula rasa* of studies of eighteenth century culture One reason that systematic classification has received so little attention is that natural history was an extremely diverse subject which appealed to a wide range of practitioners including wealthy patrons professionals and educators In order to show how the classification practices of a defined institutional setting enabled naturalists to create systems of natural history this book focuses on developments at Edinburgh's medical school one of Europe's leading medical programs In particular it concentrates on one of Scotland's most influential Enlightenment naturalists Rev Dr John Walker the professor of natural history at the school from 1779 to 1803 Walker was a traveller cleric author and advisor to extremely powerful aristocratic and government patrons as well as teacher to hundreds of students some of whom would go on to become influential industrialists scientists physicians and politicians This book explains how Walker used his networks of patrons and early training in chemistry to become an eighteenth century naturalist Walker's mineralogy was based firmly in chemistry an approach common in Edinburgh's medical school but a connection that has been generally overlooked in the history of British geology By explicitly connecting eighteenth century geology to the chemistry being taught in medical settings this book offers a dynamic new interpretation of the nascent earth sciences as they were practiced in Enlightenment Britain Because of Walker's influence on his many students the book also provides a unique insight into how many of Britain's leading Regency and Victorian intellectuals were taught to think about the composition and structure of the material world

*Science and Medicine in the Scottish Enlightenment* Charles W. J. Withers, Paul Wood, 2002 Writing to Dugald Stewart in

June 1789 Thomas Jefferson enthused that as far as science was concerned no place in the world can pretend to a competition with Edinburgh Yet despite similar encomiums down the years the role of the natural sciences and medicine in the Scottish Enlightenment is still neither generally appreciated nor fully understood This collection of ten essays by scholars in the field provides a comprehensive overview of the place of scientific and medical enquiry in Scotland during the period 1690 1815 Each chapter presents new research in order to reflect upon previous interpretations and to suggest fresh perspectives on the relationship between science and medicine and culture and society in 18th century Scotland Collectively the essays illustrate both the centrality of natural and medical knowledge in enlightened culture and the wider implications of Scotland's story for an understanding of science and medicine in the modern world

**Science and Beliefs** Matthew D. Eddy, 2017-05-15 The years between 1700 and 1900 witnessed a fundamental transition in attitudes towards science as earlier concepts of natural philosophy were replaced with a more modern conception of science This process was by no means a simple progression and the changing attitudes to science was marked by bitter arguments and fundamental differences of opinion many of which are still not entirely resolved today Approaching the subject from a number of cultural angles the essays in this volume explore the fluid relationship between science and belief during this crucial period and help to trace the development of science as an independent field of study that did not look to religion to provide answers to the workings of the universe Taking a broadly chronological approach each essay in this book addresses a theme that helps illuminate these concerns and highlights how beliefs both religious and secular have impinged and influenced the scientific world By addressing such key issues such as the ongoing debate between Christian fundamentalists and followers of Darwin and the rise of respectable atheism fascinating insights are provided that help to chart the ever shifting discourse of science and beliefs

Affinity, That Elusive Dream Mi Gyung Kim, 2008-01-25 In the eighteenth century chemistry was transformed from an art to a public science Chemical affinity played an important role in this process as a metaphor a theory domain and a subject of investigation Goethe's *Elective Affinities* which was based on the current understanding of chemical affinities attests to chemistry's presence in the public imagination In *Affinity That Elusive Dream* Mi Gyung Kim restores chemical affinity to its proper place in historiography and in Enlightenment public culture The Chemical Revolution is usually associated with Antoine Laurent Lavoisier who introduced a modern nomenclature and a definitive text Kim argues that chemical affinity was erased from historical memory by Lavoisier's omission of it from his textbook She examines the work of many less famous French chemists including physicians apothecaries metallurgists philosophical chemists and industrial chemists to explore the institutional context of chemical instruction and research the social stratification that shaped theoretical discourse and the crucial shifts in analytic methods Apothecaries and metallurgists she shows shaped the main theory domains through their innovative approach to analysis Academicians and philosophical chemists brought about two transformative theoretical moments through their efforts to create a rational discourse of chemistry in tune with the reigning

natural philosophy The topics discussed include the corpuscular Cartesian model in French chemistry in the early 1700s the stabilization of the theory domains of composition and affinity the reconstruction of French theoretical discourse in the middle of the eighteenth century the Newtonian languages that plagued the domain of affinity just before the Chemical Revolution Guyton de Morveau s program of affinity chemistry Lavoisier s reconstruction of the theory domains of chemistry and Berthollet s path as an affinity chemist *Die Philosophie des 18.
