 Abstract With a meaning preserving restructuring tool a software engineer can change a program s structure to ease future modifications However deciding how to restructure the program requires a global understanding of the program s structure which cannot be derived easily by directly inspecting the source code We describe a manipulable program visualization the star diagram that supports the restructuring task of encapsulating a global data structure The star diagram graphically displays information pertinent to encapsulation and direct manipulation of the diagram causes the underlying program to be restructured The visualization compactly presents all statements in the program that use the given global data structure helping the programmer to choose the functions that completely encapsulate it Additionally the visualization elides code unrelated to the data structure and to the task and collapses similar expressions to help the programmer identify frequently occurring code fragments and manipulate them together The visualization is mapped directly to the program text so manipulation of the visualization also restructures the program We present the star diagram concept and describe an implementation of the star diagram built upon a meaning preserving restructuring tool for Scheme We also describe our creation of star diagram generators for C programs and test the scalability of the star diagram using large C and MUMPS programs *Dictionary Catalog of the Research Libraries of the New York Public Library, 1911-1971* New York Public Library.
