The book is published to provied a concise text book that encompasses important branches like pharmaceutical Biological polymer leather and Agricultural Chemistry Conservation of Leather and Related Materials Marion Kite, Roy Thomson, 2006 The conservation of skin leather and related materials is an area that until now has had little representation by the written word in book form Marion Kite and Roy Thomson of the Leather Conservation Centre have prepared a text which is both authoritative and comprehensive including contributions from the leading specialists in their fields such as Betty Haines Mary Lou Florian Ester Cameron and Jim Spriggs The book covers all aspects of Skin and Leather

preservation from Cuir Bouillie to Bookbindings There is significant discussion of the technical and chemical elements necessary in conservation meaning that professional conservators will find the book a vital part of their collection As part of the Butterworth Heinemann Black series the book carries the stamp of approval of the leading figures in the world of Conservation and Museology and as such it is the only publication available on the topic carrying this immediate mark of authority The Chemistry of Synthetic Dyes V8 K Venkataraman, 2012-12-02 The Chemistry of Synthetic Dyes Volume VII stresses the relation between the chemistry of synthetic dyes and their application properties This book describes the dyes for leather synthetic carotenoids as food colorants and solvent dyes The phenomenal progress made in transfer printing which the first commercial process became available as recently as 1968 is also discussed This text likewise considers the influence of structural factors on the lightfastness of dyed fibers and structures of dyes with their technical properties This volume is a good reference for organic chemists and technologists working on the synthesis of dyes and their applications
