**Practice and Theory of Automated Timetabling IV** Edmund Burke,Patrick De Causmaecker,2003-08-28

This volume contains a selection of papers from the 4th International Conference on the Practice and Theory of Automated Timetabling PATAT 2002 held in Gent August 21-23 2002. Since the first conference in Edinburgh in 1995 the range of timetabling applications at the conferences has become broader and more diverse. In the selected papers volume from the 1995 conference there were just two contributions out of 22 which did not specifically address school and university timetabling. In the selected papers volume from the 1997 conference in Toronto the number of papers which tackled non educational problems increased. Two of the papers addressed more than one timetabling application. In both of these papers educational applications were considered in addition to other applications. A further three papers were concerned with non educational applications. The conference steering and programme committees have worked hard to attract a wide range of timetabling applications. In the conference held in Konstanz in 2000 the diversification of timetabling problems increased significantly. Of the 21 selected papers in the postconference volume just 13 were specifically concerned with educational timetabling. In the previous volumes the papers had been sectioned according to solution technique. In the Konstanz volume the papers were classified according to application domains. One section of the volume was entitled Employee Timetabling while sports timetabling aircraft scheduling and general software architectures for timetabling were also represented. In the present volume more than one third of the 21 papers discuss problems in application areas other than academic and educational ones. Sports timetabling and hospital timetabling are particularly well represented.

This volume contains a selection of papers from the 5th International Conference on the Practice and Theory of Automated Timetabling PATAT 2004 held in Pittsburgh USA August 18-20 2004 Indeed as we write this preface in the Summer of 2005 we note that we are about one month away from the tenth anniversary of the very first PATAT conference in Edinburgh Since those very early days the conference series has gone from strength to strength and this volume represents the latest in a series of very rigorously refereed volumes which showcase a broad spectrum of ground breaking timetabling research across a very wide range of timetabling problems and applications Timetabling is an area that unites a number of disparate fields and which cuts across a number of diverse academic disciplines While the most obvious instances of timetabling occur in educational institutions timetabling also appears in sports applications transportation planning project scheduling and many other fields Viewing timetabling as a unifying theme enables researchers

from these various areas to learn from each other and to extend their own search and practice in new and innovative ways

This volume continues the trend of the conference series to extend the definition of timetabling beyond its educational roots In this volume seven of the 19 papers involve domains other than education Of course educational timetabling remains at the core of timetabling research and the papers in this volume represent the full range of this area including exam timetabling room scheduling and class rostering     Practice and Theory of Automated Timetabling V Edmund Burke,Michael
