

Everything You Need To Know About Atoms

Most atoms have three different subatomic particles inside them: protons, neutrons, and electrons. The protons and neutrons are packed together into the center of the atom and the electrons, which are very much smaller, whizz around the outside.

Three Easy Pieces

Even though many super-tiny atomic particles exist, you only need to remember the three basic parts of an atom: electrons, protons, and neutrons.

Charges of Atoms

The electron always has a "-", or negative, charge. The proton always has a "+", or positive, charge. If the charge of an entire atom is "0", or neutral, there are equal numbers of positive and negative charges.

0

Neutron: Large with no charge

+

Proton: Large with positive charge

-

Electron: Small with negative charge

Atomic particles have different sizes and different charges
