

General Relativistic Hydrodynamics equations

The general relativistic hydrodynamics equations are obtained from the local conservation laws of the stress-energy tensor, $T^{\mu\nu}$ (the Bianchi identities), and the matter current density J^μ (the continuity equation):

$$\nabla_\mu T^{\mu\nu} = 0 \quad \nabla_\mu J^\mu = 0$$

Equations of motion

As usual ∇_μ stands for the covariant derivative associated with the four dimensional spacetime metric $g_{\mu\nu}$. The density current is given by $J^\mu = \rho u^\mu$, u^μ representing the fluid 4-velocity and ρ the rest-mass density in a locally inertial reference frame.

The stress-energy tensor for a non-perfect fluid is defined as:

$$T^{\mu\nu} \equiv \rho(1 + \varepsilon)u^\mu u^\nu + (p - \zeta\Theta)h^{\mu\nu} - 2\eta\sigma^{\mu\nu} + q^\mu u^\nu + q^\nu u^\mu$$

where ε is the rest-frame specific internal energy density of the fluid, p is the pressure, and $h^{\mu\nu}$ is the spatial projection tensor, $h^{\mu\nu} = u^\mu u^\nu + g^{\mu\nu}$. In addition, ζ and η are the shear and bulk viscosity coefficients. The expansion, Θ , describing the divergence or convergence of the fluid world lines is defined as $\Theta = \nabla_\mu u^\mu$. The symmetric, trace-free, and spatial shear tensor $\sigma^{\mu\nu}$ is defined by:

$$\sigma^{\mu\nu} = \frac{1}{2}(\nabla_\alpha u^\mu h^{\alpha\nu} + \nabla_\alpha u^\nu h^{\alpha\mu}) - \frac{1}{3}\Theta h^{\mu\nu}$$

Finally q^μ is the energy flux vector.

Relativistic Numerical Hydrodynamics:

Relativistic Numerical Hydrodynamics James R. Wilson, Grant J. Mathews, 2003-11-06 Calculations of relativistic hydrodynamics are crucial to several areas of current research in the physics of supernovae and stellar collapse This book provides an overview of the computational framework in which such calculations have been developed with examples of applications to real physical systems Beginning with the development of the equations and differencing schemes for special relativistic hydrodynamics the book stresses the viability of the Euler Lagrange approach to most astrophysical problems It details aspects of solving the Einstein equations together with the fluid dynamics for various astrophysical systems in one two and three dimensions Relativistic Hydrodynamics Luciano Rezzolla, Olindo Zanotti, 2013-09-26 This book provides an up to date lively and approachable introduction to the mathematical formalism numerical techniques and applications of relativistic hydrodynamics The topic is presented here in a form which will be appreciated both by students and researchers in the field **Elements of Numerical Relativity and Relativistic Hydrodynamics** Carles Bona, Carlos Palenzuela-Luque, Carles Bona-Casas, 2009-07-24 Many large scale projects for detecting gravitational radiation are currently being developed all with the aim of opening a new window onto the observable Universe As a result numerical relativity has recently become a major field of research and Elements of Numerical Relativity and Relativistic Hydrodynamics is a valuable primer for both graduate students and non specialist researchers wishing to enter the field A revised and significantly enlarged edition of LNP 673 Elements of Numerical Relativity this book starts with the most basic insights and aspects of numerical relativity before it develops coherent guidelines for the reliable and convenient selection of each of the following key aspects evolution formalism gauge initial and boundary conditions and various numerical algorithms And in addition to many revisions it includes new convenient damping terms for numerical implementations a presentation of the recently developed harmonic formalism and an extensive new chapter on matter space times containing a thorough introduction to relativistic hydrodynamics While proper reference is given to advanced applications requiring large computational resources most tests and applications in this book can be performed on a standard PC **Numerical Methods for Hyperbolic Equations** Elena Vázquez-Cendón, Arturo Hidalgo, Pilar Garcia Navarro, Luis Cea, 2012-11-05 Numerical Methods for Hyperbolic Equations is a collection of 49 articles presented at the International Conference on Numerical Methods for Hyperbolic Equations Theory and Applications Santiago de Compostela Spain 4 8 July 2011 The conference was organized to honour Professor Eleuterio Toro in the month of his 65th birthday The topics cover Hyperbolic Problems: Theory, Numerics, Applications Sylvie Benzoni-Gavage, Denis Serre, 2008-01-12 This volume contains papers that were presented at HYP2006 the eleventh international Conference on Hyperbolic Problems Theory Numerics and Applications This biennial series of conferences has become one of the most important international events in Applied Mathematics As computers became more and more powerful the interplay between theory modeling and numerical algorithms gained considerable

impact and the scope of HYP conferences expanded accordingly **Godunov Methods** E.F. Toro, 2012-12-06 This edited review book on Godunov methods contains 97 articles all of which were presented at the international conference on Godunov Methods Theory and Applications held at Oxford in October 1999 to commemorate the 70th birthday of the Russian mathematician Sergei K Godunov The meeting enjoyed the participation of 140 scientists from 20 countries one of the participants commented everyone is here meaning that virtually everybody who had made a significant contribution to the general area of numerical methods for hyperbolic conservation laws along the lines first proposed by Godunov in the fifties was present at the meeting Sadly there were important absentees who due to personal circumstance could not attend this very exciting gathering The central theme of the meeting and of this book was numerical methods for hyperbolic conservation laws following Godunov's key ideas contained in his celebrated paper of 1959 But Godunov's contributions to science are not restricted to Godunov's method *Barriers and Challenges in Computational Fluid Dynamics* V. In this volume designed for engineers and scientists working in the area of Computational Fluid Dynamics CFD experts offer assessments of the capabilities of CFD highlight some fundamental issues and barriers and propose novel approaches to overcome these problems They also offer new avenues for research in traditional and non traditional disciplines The scope of the papers ranges from the scholarly to the practical This book is distinguished from earlier surveys by its emphasis on the problems facing CFD and by its focus on non traditional applications of CFD techniques There have been several significant developments in CFD since the last workshop held in 1990 and this book brings together the key developments in a single unified volume **Numerical Relativistic**
