Relativistic, Quantum Electrodynamics, and Weak Interaction Effects in Atoms, 2008 Relativistic, Quantum Electrodynamic, and Weak Interaction Effects in Atoms Walter Johnson, Peter Mohr, Joseph Sucher, 1989 **The Effects of Relativity in Atoms, Molecules, and the Solid State** Stephen Wilson, I.P. Grant, B.L. Gyorffy, 2012-12-06 Recent years have seen a growing interest in the effects of relativity in atoms molecules and solids On the one hand this can be seen as result of the growing awareness of the importance of relativity in describing the properties of heavy atoms and systems containing them This has been fueled by the inadequacy of physical models which either neglect relativity or which treat it as a small perturbation On the other hand it is dependent upon the technological developments which have resulted in computers powerful enough to make calculations on heavy atoms and on systems containing heavy atoms meaningful Vector processing and more recently parallel processing techniques are playing an increasingly vital role in rendering the algorithms which arise in relativistic studies tractable This has been exemplified in atomic structure theory where the dominant role of the central nuclear charge simplifies the problem enough to permit some prediction to be made with high precision especially for the highly ionized atoms of importance in plasma physics and in laser confinement studies Today s sophisticated physical models of the atom derived from quantum electrodynamics would be intractable without recourse to modern computational machinery Relativistic atomic structure calculations have a history dating from the early attempts of Swirls in the mid 1930 s but continue to provide one of the primary test beds of modern theoretical physics **Springer Handbook of Atomic, Molecular, and Optical Physics** Gordon W. F. Drake, 2023-02-09 Comprises a comprehensive reference source that unifies the entire fields of atomic molecular and optical AMO physics assembling the principal ideas techniques and results of the field 92 chapters written by about 120 authors present the principal ideas techniques and results of the field together with a guide to the primary research literature carefully edited to ensure a uniform coverage and style with extensive cross references Along with a summary of key ideas techniques and results many chapters offer diagrams of apparatus graphs and tables of data From atomic spectroscopy to applications in comets one finds contributions from over 100 authors all leaders in their respective disciplines Substantially updated and expanded since the original 1996 edition it now contains several entirely new chapters covering current areas of great research interest that barely existed in 1996 such as Bose Einstein condensation quantum information and cosmological variations of the fundamental constants A fully searchable CD ROM version of the contents accompanies the handbook *Advances in Atomic, Molecular, and Optical Physics*, 1994-07-26 The latest volume in the highly acclaimed series addresses atomic collisions assessing the status of the current knowledge identifying deficiencies and exploring ways to improve the quality of cross section data Eleven articles written by foremost experts focus on cross section determination by experiment or theory on needs in selected applications and on efforts toward the compilation and dissemination of data This is the first volume edited under the additional direction of Herbert Walther

Presents absolute cross sections for atomic collisions Uses benchmark measurements and benchmark calculations Discusses needs for cross section data in applications Contains a guide to data resources bibliographies and compendia

Atomic Physics of Highly Charged Ions Erhard Salzborn, Paul H. Mokler, Alfred Müller, 2012-12-06 This book contains the invited lectures and contributed papers presented at the V International Conference on the Physics of Highly Charged Ions which was held at the Justus Liebig University at Giessen 10-14 September 1990 This conference was the fifth in a series after Stockholm 1982 Oxford 1984 Groningen 1986 and Grenoble 1988 to deal with a rapidly growing field which comprises the spectroscopy of highly charged ions and their interactions with photons electrons atoms ions and solids Most of the matter of the universe is in the ionized state Investigations dealing with hot plasmas on earth have been greatly furthered by thermonuclear fusion research The increasing maturity of this programme has revealed the fundamental role of highly charged ions in fusion plasmas Today it is clear that a detailed knowledge of the production mechanisms of highly charged ions and their interactions with other plasma constituents is an important prerequisite for a better understanding of the microscopic and macroscopic plasma properties The study of highly charged ions involves various branches of physics It was the aim of the conference to bring together physicists working in atomic collisions and spectroscopy in plasma physics and astrophysics as well as in solid state and ion source physics About 220 scientists from 20 nations attended the conference indicating the strong worldwide interest and the vitality of research in this field
