Object-oriented Analysis and Design with Applications Grady Booch, 1994 This revision of Grady Booch's classic offers the first industry wide standard for notation in developing large scale object oriented systems Laying the groundwork for the development of complex systems based on the object model the author works in C to provide five fully developed design examples along with many smaller applications Three of these capstone projects are new with this edition including an inventory tracking system which implements a client server The other four span problem domains as diverse as data acquisition for scientific tools framework artificial intelligence and command and control To measure progress metrics in object development are suggested so that the developer knows how the project is going In addition the author demonstrates good and bad object designs and shows how to manage the trade offs in complex systems *Information Systems for Urban Planning* Robert Laurini, 2018-10-08 Urban planners who need to design information systems require an understanding of systems analysis data acquisition and GIS In recent times the need has been to make computer based maps by using a GIS but planners now need tools for co operative work using groupware systems for global visualization and real time monitoring of urban activities and phenomena Planners have moved beyond drawing land use plans to examining the evolution of urban activities to monitor and analyze urban societal and environmental problems Both practitioners and students will find this book useful provided they have an adequate grounding in computing data analysis and GIS and they are looking to use and design computer systems for developing maps and written statements for city planning Therefore novel tools like using multimedia information systems and GIS will become an increasingly important eventually essential part of the job
