SUMMARY

Following the new ESPEN Standard Operating Procedures, the previous 2019 guideline to provide best medical nutritional therapy to critically ill patients has been shortened and partially revised. Following this update, we propose this publication as a practical guideline based on the published scientific guideline, but shortened and illustrated by flow charts. The main goal of this practical guideline is to increase understanding and allow the practitioner to implement the Nutrition in the ICU guidelines. All the items discussed in the previous guidelines are included as well as special conditions.

1. Introduction

The European Society for Clinical Nutrition and Metabolism (ESPEN) has published guidelines on nutrition in the intensive care unit (ICU) in 2006 (enteral nutrition (EN)) and 2009 (parenteral nutrition (PN)) [1,2]. Since then, the ESPEN

methodology has been upgraded to the "S3 guidelines level" described elsewhere [3] resulting in rigorous evidence-based and consensus-based recommendations that were published in 2019 [4]. The present guideline is a shortening and a partial revision of the previous guideline. The determination of the effect of nutrition alone on any possible outcome is complicated by the fact that the severity of illness and the number of comorbidities encountered among adult ICU patients is increasing [5]. Furthermore, the large heterogeneity of the ICU population potentially reduces the external validity of the recommendations,
