*Practical Statistics for Field Biology* Jim Fowler, Lou Cohen, Philip Jarvis, 2013-06-20 Provides an excellent introductory

text for students on the principles and methods of statistical analysis in the life sciences helping them choose and analyse statistical tests for their own problems and present their findings An understanding of statistical principles and methods is essential for any scientist but is particularly important for those in the life sciences The field biologist faces very particular problems and challenges with statistics as real life situations such as collecting insects with a sweep net or counting seagulls on a cliff face can hardly be expected to be as reliable or controllable as a laboratory based experiment Acknowledging the peculiarities of field based data and its interpretation this book provides a superb introduction to statistical analysis helping students relate to their particular and often diverse data with confidence and ease To enhance the usefulness of this book the new edition incorporates the more advanced method of multivariate analysis introducing the nature of multivariate problems and describing the techniques of principal components analysis cluster analysis and discriminant analysis which are all applied to biological examples An appendix detailing the statistical computing packages available has also been included It will be extremely useful to undergraduates studying ecology biology and earth and environmental sciences and of interest to postgraduates who are not familiar with the application of multivariate techniques and practising field biologists working in these areas
