

General

- Rivers often adjust their roughness, velocity, slope, depth, width, and plan form in response to human activities and natural conditions.
- When a river channel is modified locally, it may initiate changes in the channel and flow characteristics.
- The study of river engineering traditionally deals with all hydraulic engineering works on river
- River hydraulics includes the evaluation of flow characteristics of river and its changes over time.
- Results from analyses of river hydraulics are critical for project formulation, design, construction, and operation.
- Eg., designing of dams, spillways, levees, and guide banks requires both hydrological and hydraulic computations.
